SUMMARY

Between 13th and 16th October 2005 Oxford Archaeology (OA) carried out an archaeological watching brief at the redundant garage site, Station Road, Goring on Thames, Oxfordshire (NGR: SU 5991 8064). The work was commissioned by McAdden Properties in advance of demolition of the existing buildings and construction of nine new residential apartments. The watching brief revealed that the area had been severely truncated and disturbed, probably during the construction of the now demolished garage, with no earlier significant stratigraphy or archaeology surviving.

1 INTRODUCTION

1.1 Scope of work

1.1.1 Between 13th and 16th October 2005 Oxford Archaeology (OA) carried out an archaeological watching brief at the redundant garage site, Station Road, Goring on Thames, Oxfordshire (NGR: SU 5991 8064). The work was commissioned by McAdden Properties in respect of a planning application for the demolition of existing buildings, clearance and removal of underground tanks and construction of nine new residential apartments and associated parking. (Planning Application No. POS/W0243/CA)

1.1.2 A project brief was set by Paul Smith, the Oxfordshire County Archaeological Officer outlining the requirements of an archaeological monitoring and recording action (watching brief) to be conducted as part of the planning consent (OCAS, 2005).

1.1.3 OA prepared a Written Scheme of Investigation detailing how it would meet the requirements of the brief (OA, 2005).

1.2 Location, geology and topography

1.2.1 The site comprised a redundant garage with associated buildings, areas of concrete hard standing underground fuel tanks and petroleum pipelines. It is located on the north side of Station Road, Goring-on-Thames, east of the junction with Manor Road and Ferry Lane. The site is bounded to the south by Station Road and to the east, west and north by residential and commercial properties.

1.2.2 The site has been terraced into a gentle south facing slope, the base of which lies at approximately 45 m OD and occupies an area of 0.1 hectares. The underlying geology is Thames River Gravels.
1.3 **Archaeological and historical background**

1.3.1 The archaeological background to the watching brief was prepared for the WSI for the project (OA, 2005) and is reproduced below.

1.3.2 The development site lies within the historic core of Goring-on-Thames, which is designated as a Conservation Area. Several Listed Buildings are located at this western end of Station Road, including Vine Cottage and The Catherine Wheel public house, both of which date to the 17th century. In addition, a find of 3rd and 4th century Roman coins was recorded in 1962 from 67 Station Road.

1.3.3 Ferry Lane, which forms the western continuation of Station Road, leads to a probable Roman crossing point on the Thames, where Roman pottery has been recovered from the river. There is therefore potential for evidence as early as the Roman period existing within the development area, but the greatest level of evidence is likely to be associated with the later medieval and post medieval evolution of the historic core of Goring.

2 **PROJECT AIMS AND METHODOLOGY**

2.1 **Aims**

2.1.1 To identify and record the presence or absence, extent, condition, quality and date of archaeological remains in the areas affected by the development.

2.1.2 To preserve by record any archaeological deposits or features that may be disturbed or destroyed during the development.

2.1.3 To make available the results of the archaeological investigation.

2.2 **Methodology**

2.2.1 The watching brief was conducted as a series of site visits during works likely to disturb archaeological deposits. These included the machine clearance of the site and machine digging of foundation and service trenches.

2.2.2 A plan was maintained of these works at a scale of 1:100 (Fig. 2) and any recorded sections drawn at a scale of 1:20. All excavations and sections were photographed using colour slide and black and white print film. A general photographic record of the work was also made. Recording followed procedures detailed in the *OA Field Manual* (ed. D Wilkinson, 1992).

3 **RESULTS**

3.1 **Description of deposits**

3.1.1 A large part of the site had been heavily disturbed during the installation (and removal) of the underground fuel tanks and pipework, principally the eastern and
south-eastern area of the site. The western and south-western edge of the site was least disturbed and recording concentrated in that area.

3.1.2 The stratigraphy exposed was similar throughout the recorded area, and the following description will apply for all the sections.

3.1.3 The underlying natural, a coarse gravel and grey clay silt mix (5) was exposed within the centre of the site, appearing at between 1.0 m and 1.3 m below ground level (Fig. 3, sections 1 and 3). This was overlaid by a layer of grey-brown silt clay (4) measuring between 0.3 m and 0.4 m in depth (Fig. 3, sections 1, 2 and 3). This layer contained occasional gravels and some chalk flecking and represents an alluvial deposit.

3.1.4 Overlying this layer was a 0.3 m thick layer of orange-brown clay silt (3). This produced occasional chalk flecking and also represents an alluvial deposit. This was sealed by a layer of dark brown clay loam (2). This measured 0.2 m deep along the lower, southern edge of the site, rising to 0.7 m deep along the higher, northern edge. This deposit contained much charcoal flecking and fragments of 19th century clay pipe stem and transfer printed creamware suggesting it was an occupation layer, or garden topsoil, probably associated with the use of the site before it became a garage.

3.1.5 A 0.1 m to 0.2 m thick layer of demolition debris (1), composed of crushed concrete, brick and tile had been deposited over the topsoil during the demolition of the standing structures.

3.2 Finds

3.2.1 All the finds recovered were dated between the 19th and 20th centuries and consisted of fragments of transfer printed creamware and glazed earthenware, bottle glass, clay pipe stem and brick. These were all collected from Layer 2 and were evaluated on site, but were not retained.

3.3 Palaeo-environmental remains

3.3.1 No deposits suitable for palaeo-environmental sampling were encountered during the course of the watching brief.

4 Discussion and conclusions

4.1.1 The watching brief showed that the area had been subject to large scale truncation and disturbance, probably occurring during the development of the site as a garage over the preceding years. The layer of topsoil, 2, is indicative of the use of the site as a kitchen garden during the 19th and 20th centuries and is possibly related to the nearby houses, but more likely to a dwelling which originally fronted Station Road. The installation of the underground fuel tanks and pipework would have removed any evidence for this structure.
4.1.2  The topsoil was encountered directly above the alluvial deposits with no evidence for earlier occupation layers or activity (including residual finds) observed.

APPENDIX 3  SUMMARY OF SITE DETAILS

**Site name:** Station Road, Goring-on-Thames, Oxfordshire

**Site code:** GOSTR 05

**Grid reference:** SU 5991 8064

**Type of watching brief:** Machine excavation of service and foundation trenches and ground reduction.

**Date and duration of project:** 13th to 16th October 2005, 4 days

**Area of site:** 0.1 hectare

**Summary of results:** Severe post-medieval truncation and disturbance throughout the site with no earlier archaeology encountered.

**Location of archive:** The archive is currently held at OA, Janus House, Osney Mead, Oxford, OX2 0ES, and will be deposited with Oxfordshire County Museums Service in due course, under the following accession number: OXCMS:2005.103
