Plate 41     Detail of Timber roof Construction above Room 8 from East
Summary

On the 7th March 2016 Oxford Archaeology East undertook a photographic survey at 143 Oundle Road, Woodston, Peterborough (TL 18529 97823). The survey concentrated on a range of buildings comprising a cottage, a workshop and a barn. This was carried out in advance of proposed demolition and redevelopment of the site for residential dwellings.
1 INTRODUCTION

1.1 Location and scope of work
1.1.1 An historic buildings photographic survey was conducted at 143 Oundle Road, Woodston, Peterborough, PE2 9PW (TL 18529 97823) (Fig. 1).

1.1.2 This photographic survey was undertaken in accordance with a Brief issued by Peterborough City Archaeologist, supplemented by a Written Scheme of Investigation prepared by OA East. The works followed the guidelines of an English Heritage Level 1 photographic survey ("Understanding Historic Buildings – A Guide to Good Recording Practice" English Heritage, 2006). As set out in the specification, the survey made a photographic record of the interior and exterior of the building prior to demolition, paying particular attention to the east elevation.

1.1.3 The site archive is currently held by OA East and will be deposited with the appropriate county stores in due course.

1.2 Location, Geology and topography
1.2.1 The following section is taken from Nicholls (2015).

1.2.2 The site is located to the south of the River Nene. The solid geology comprises Oxford Clay formations in part overlain by sand and gravel deposits of the River Second Terrace (http://mapapps.bgs.ac.uk/geologyofbritain/home.html accessed 10 June 2015).

1.3 Archaeological and historical background
1.3.1 The following section is taken from Nicholls (2015).

1.3.2 Approximately 150m to the south-east of the site, investigations at The Walnuts revealed a scatter of Neolithic pits and gullies. Residual sherds of Roman pottery and a small assemblage of roofing tile would indicate the presence of Roman activity within the vicinity (Thomas et al: 2008).

1.3.3 Roughly 200m to the west of the site, a series of undated ditches and pits were discovered in 2005, some of which are believed to date to the prehistoric period (Casa-Hatton 2001).

1.3.4 A number of isolated flint finds have been found within Woodston including Palaeolithic axes, Levallois flakes, barbed and tanged and leaf-shaped arrowheads (RCHM 1969).

1.3.5 Within Woodston there is evidence for Iron Age settlement with pottery, burnt flints and animal bone being uncovered from a series of pits. There were also three or four inhumations, potentially of the same date (RCHM 1969).

1.3.6 Evidence for Roman settlement was found in the early 20th century, with finds such as Roman pottery including Samian and Nene Valley wares. A number of coins were also uncovered (RCHM 1969).

1.3.7 Immediately to the south of the proposed development site an extensive Anglo-Saxon burial ground, including cremation and inhumation burials dating from 550AD, was found during gravel extraction between 1864 and 1920. The grave goods included items of personal adornment and weapons, however, evidence for settlement is elusive.
1.3.8 The church of St Augustine of Canterbury is to the south of the development area and is mentioned in the Doomsday survey of 1086. Although the church was mostly rebuilt and remodelled in the middle of the 19th Century, a few 14th century architectural elements survive (http://www.british-history.ac.uk/rchme/hunts/p297- accessed 10 June 2015). The church would have acted as a focus for settlement during the medieval period.

1.3.9 Approximately 200m to the west of the site, a large amount of evidence for late and post-medieval activity was uncovered in the form of a timber building and internal and external surfaces most likely for agricultural use. A number of pits yielding evidence for domestic refuse were also found in this area. Abandonment of the site seems to have occurred in the 18th century and is represented by the infilling of a well and other related features (Thomas et al: 2008).

1.3.10 Woodston originated as a small village which grew around the junction of Oundle Road and Wharf Road in the late 10th Century. An Act of Enclosure was passed in 1809 and an award made in 1821. Within the southern part of the parish, maps suggest that the area underwent enclosure in the 18th Century and that three open fields existed at this time running north south from the river; Orton, Middle and Fletton fields.

1.3.11 A structure of similar size and alignment to 143 Oundle Road is present on the 1811 OS Map (Fig. 2).

1.4 Acknowledgements
1.4.1 The author would like to thank Postland Developments Limited who commissioned and funded the project. The photographic survey was undertaken by Michael Webster. The figures were compiled by Charlotte Walton. The report was edited by Stephen Morgan and Aileen Connor who also managed the project.
2 AIMS AND METHODOLOGY

2.1 Aims
2.1.1 The original aims of the project were set out in the Brief (Casa-Hatton 2016) and Written Scheme of Investigation (Connor 2016). The main aims of this project survey were to undertake a Level 1 photographic survey and provide a basic visual record of the building, supplemented by information needed to identify the building's location, age and type.

2.2 Methodology
2.2.1 The methodology used followed that outlined in the Brief (Casa-Hatton 2016) and detailed in the Written Scheme of Investigation (Connor 2016).

2.2.2 The photographic survey adhered to the guidance for English Heritage Level 1 photographic surveys as set out in "Understanding Historic Buildings – A Guide to Good Recording Practice" (English Heritage 2006).

2.2.3 Photographs were taken using a Nikon D90 high quality digital camera. Photographs are saved in RAW and JPEG formats.

2.2.4 Conditions during the photographic survey were dry and cold. Light was generally adequate for taking both internal and external photographs.
3 RESULTS

3.1 Introduction
3.1.1 The results and conclusions of the photographic survey are presented below. The exterior of the building and its location are discussed first, followed by detailed descriptions of the interiors of each room.

3.2 Building Exterior

East elevation (Fig. 3 & Plate 1)
3.2.1 This elevation incorporated the east gable end of the building with a barn structure added against the south side of the building. The main building is a single storey structure (Room 1), with blocked window. The later barn comprises a two storey structure (Room 6) which contains a larger blocked window at first floor level.

3.2.2 The walls are constructed of hand-made brick, the respective roofs are constructed from greyish blue asbestos diamond-shaped tiles and grey slate tiles, parts of which have been repaired at various times. The roof of the main building is shallow sloping around its base, possibly suggesting a Bell Cast type of roof style, but its east end is of Hip roof style. The north end is of gable end style.

3.2.3 This elevation also contains the east side wall of a cottage, which was constructed against the south side of the barn structure. This house is still occupied today and lies outside the scope of this survey.

North elevation (Fig. 3 & Plate 2)
3.2.4 Only the eastern end of the North Elevation was accessible to record.

3.2.5 This elevation, in common with the south and east elevations, is constructed of hand made bricks. Brick repairs have been added to the lower roof line (Plate 2).

3.2.6 Evidence for two blocked windows are visible, these form part of a series of such features along the entire north elevation, and recorded in the separate room interiors of the building.

3.2.7 The roof is identical to that along the south facade, constructed of greyish blue asbestos diamond-shaped tiles with glass covered openings inserted. Along the eaves the roof slope shallowed giving the overall appearance of a Bell Cast type roof.

South elevation (Fig. 3 & Plates 3-6)
3.2.8 This aspect of the building is entirely constructed from hand-made bricks. A cottage of contemporary date at the west end of the building comprises two storeys, the upper floor being accessed by an external cast iron metal stair (Plate 3). Its lower space comprised Room 4. A mid-late 20th century brick extension, of single storey height, containing Room 5, had been added to the west end of the cottage.

3.2.9 A double doorway accessing Room 1 (Plate 5) was recorded midway along the southern elevation. A door way in the roof space allowing access to Room 8 (Plate 8) was possibly used for loading and unloading goods.

3.2.10 Towards the east end of the range part of the wall has collapsed (Plate 6). Where the wall survives a blocked window and doorway are present. These elements were possibly originally external openings but are now internal to the barn structure (Room 6).
3.2.11 The roof is covered with large greyish blue diamond-shaped asbestos tiles with a series of glass covered openings which match the pattern of former (Plate 5).

3.3 Building Interior

**Room 1 (Fig. 3)**

3.3.1 This room is the largest element forming the eastern part of building. (Fig. 3 and Plates 9 and 10). It is accessed by a double doorway in the south elevation (Plate 15). The present room measures 18.24m x 4.73m and has a ceiling height of 3.77m. At present the room is empty but may have been used as storage for goods relatively recently.

3.3.2 The exterior grounds (Plate 15) are accessed by late 19th Century timber double doors with decorative cast iron handles. Each door contains six small windows in its upper parts, while the lower parts comprise a wooden panel. Each door measures 1.85m by 0.91m.

3.3.3 Small windows measuring 1.1m by 0.60m are located along the north, east and south walls (Plates 11 and 12). These too are most probably of a 19th Century date and reflect the building’s utilitarian use.

3.3.4 The south wall of the room fronts onto the open yard area but is partially collapsed. It is 0.35m thick and constructed from hand-made bricks of probably late 18th or early 19th century date.

3.3.5 The floor of the room is constructed from a concrete slab which seals an earlier brick floor.

3.3.6 The ceiling comprises wooden boarding which is a later addition and hides a timber beamed roof (Plate 16).

**Room 2 (Fig. 3)**

3.3.7 This room forms part of an office complex which is a later addition at the west end of Room 1 (Plate 18) and east end of Room 3 (Plate 22). The room was constructed by the insertion of ply board walls forming the east, south and west side of a two cell office (Plates 19, 20 and 21). Each of these walls is painted dark and pale green. The two cell rooms measure 1.04m by 2.13m and 1.64m by 3.79m respectively, the ceiling being at a height of 1.99m.

3.3.8 A timber door, measuring 1.85m by 0.91m and containing nine glass panels in the upper half, leads into Room 1. A second timber door leading into Room 3 is 1.85m by 0.74m and contains a single glass panel in the upper part.

3.3.9 Windows are present in the east, south and west walls. A blocked window is located in the external north wall.
Room 3 (Fig. 3)

3.3.10 This room is positioned between Rooms 1/2 and 4 and measures 11.2m by 5.41m. Its low ceiling, at 1.99m high, has a series of wooden beams running north to south, giving a head clearance of 1.75m. This room sites directly below Room 8 which is set within the roof space (Plates 24 and 26).

3.3.11 The southern, western and northern walls are original but the east wall comprises the added office complex Room 2. The original walls are constructed of hand-made bricks and are painted with white wash. Along the north wall a series of blocked windows are not clearly visible.

3.3.12 No windows are apparent in this room, suggesting that it was used for storage.

3.3.13 The floor comprised a modern concrete screed (Plate 24).

3.3.14 Access to Room 3 from Room 1 (Plate 23) and Room 4 (Plate 36) is by a narrow corridor along the south wall of the building.

Room 4 (Fig 3)

3.3.15 Room 4 is located west of Room 7 in the original building. It forms the lower ground floor to the cottage structure and lies directly below a corridor and possible bedroom.

3.3.16 The room measures 5.5m by 4.95m with a ceiling at 2.42m high.

3.3.17 The walls and ceiling of the room have been covered in white and pale green wash respectively (Plate 27).

3.3.18 Two blocked windows are present in the north wall (Plate 28).

3.3.19 The entrance to the room is located in the southern wall, the door has been removed.

3.3.20 The floor surface has been covered in a smooth concrete screed (Plate 36).

3.3.21 The room contains a work surface and sink along the southern wall suggesting that this may have once been a kitchen for the cottage.

3.3.22 The entrance to Room 5, from a ramp (Plate 29), shows that this room is lower than the ground surface outside.

Room 5 (Fig. 3)

3.3.23 Room 5 is the most recent building in the complex, constructed of machine-made brick. It measures 5.22m by 4.95m with a ceiling height of 2.58m (Plate 30 and 31). The room contained no visible windows and may have been used for a storage room.

3.3.24 The ceiling and walls are plastered and white washed (Plate 30).

3.3.25 The floor surface consists of a covering of concrete screed (Plate 31).

Room 6 (Fig. 3)

3.3.26 Room 6 comprised part of a two storey brick built shed or barn and formed a portion of the east elevation of the building (Plate 7).

3.3.27 The possible barn contains a door way at first floor level (Plate 32), and a blocked window (Plate 33).

3.3.28 The room measures 7.16m by 5.23m with an overall height at the apex of the pitched wooden beamed roof of 6.6m. The height of the ceiling to the ground floor is approximately 2m.
3.3.29 The floor consists of a concrete slab sealing a brick floor, which is in turn sits on a layer of rubble.

3.3.30 The doorway and blocked window at first floor level possibly provided a means of hoisting goods from outside the building into the first floor room. This would be similar in usage to the door into the roof space of Room 8.

**Room 7 (Fig. 3)**

3.3.31 This room is a small sub-division of the west end of Room 3, against the east end of Room 4, (Plates 34 and 35). Room 7 measured 5.42m by 2.3m and was 1.89m high. The walls were of white washed bricks and the ceiling comprised chip board. A blocked window is located in the northern external wall.

3.3.32 The room sits directly below the west end of Room 8, where a brick archway is present (Plate 39). This archway may have acted as a relieving arch to support a large opening into the room from Room 4 (Plate 27).

**Room 8 (Fig. 3)**

3.3.33 This room is at first floor level in the roof space above Rooms 3 and 7. Access is gained via a corridor above Room 4 (the cottage). This corridor is 3.5m by 1.48m and was 2.48m high.

3.3.34 The room measures 11.13m by 4.66m (Plates 38 and 39) and is 3.61m high at the apex of the timber roof.

3.3.35 A ply board wall at the east end of the room has an opening accessing an extension of the first floor level towards Room 1 (Plate 37). This possibly proved that a wall at the east end of the first floor roof space has been removed.

3.3.36 The floor is constructed of wooden ply board suggesting a modern construction (Plate 38).

3.3.37 The roof support comprises timber beams (Plate 41).

3.3.38 A doorway into the southern side of the roof space acted as a way of access for goods to be deposited at first floor level to avoid the stairs (Plate 40). The door measures 1.45m by 0.85m and is constructed from timber planks with iron brackets and handle, typical of a 19th century date.

3.3.39 A large brick relieving arch, built into the west wall of the building, provides support above the opening into the west wall of Room 7, below (Plate 39).

**3.4 Summary**

3.4.1 The historic buildings photographic survey carried out at 143 Oundle Road, Woodston, Peterborough has provided a basic visual record of the buildings in their present state. It is evident that additions and alterations have changed the layout, fabric and uses of the building throughout its history.

3.4.2 It is possible that the building had more than one historical use. The style and structure of the original building are consistent with a late 18th century or early 19th century date and it is therefore likely that the building is the same as that shown on the 1811 map (Fig. 2) although its original usage then is unclear, it is likely to have been in use as a barn associated with a farm complex. The later cottage is likely to have provided living quarters when the original building changed use, possibly to an industrial or retail outlet.
