**Description (See check lists):**

- Consists of:
  - Hill (1246)
  - Skeleton (1247)
  - Cut (1248)

- It has been heavily truncated to the E by Grave 1350.

- There is no evidence of a coffin, the skull is almost touching the side of the grave (the Cranium has clearly rolled backwards). No grave goods.

**Interpretation/Discussion**

- Group no. for adult male E-W (head arm) orientation in cut (1248). No evidence for a coffin.

- It has been heavily truncated to the E by grave 1350 (channel from 1247 was found in the fill of grave 1350). No clear relationship to (1335) (it was put cut by it).

ADULT SKELETON RECORD

SITE CODE A421
SITE NAME

Fill of [126]
Completeness 15-207.

Orientation W-E
Condition V: Good.

Feet to East

Plan No(s) 512, 516
Posture Supine, Legs + Feet parallel, HABONAILS WORN OF FEET.

Section No(s)
Coffin NAILS SURVIVE. 3418 - 3423

Co-Ordinates Coffin fittings None.

Soil description (see Context 1128)

Additional description
This grave was heavily truncated by Gap 1303. All that survived was the lower legs from knee joints down. Feet were orientated upright with hobnails around both as the feet were worn for information. However, such a lot of root activity had disturbed the feet I was not able to keep hobnails separated.

**Description (See check lists):**
- Base of light tan brown grit sandy clay  
- 30.1: Small gash area (001-0.05m dia).  
- 1.05m thick. @ 0.05m surviving x  
- 0.85m wide. @ west ½ has been  
- Truncated away by later grave cut [1303]. Green nails recovered  
- In situ would suggest coffin present. There was prolific disturbance from root growth. The feet were rodeled with thin roostlets  
- Mattock + Shovel / Cloudy.

**Interpretation/Discussion**

Grave fill of GRP 1324 relates to sk 1327.

**STRATIGRAPHIC MATRIX**

- Gr 1317
- This context: Gr 1329
- 1625

**Interpretation/Discussion**

This group consists of a de-capsulation from an adult male inhumation. The head and top two vertebrae were positioned between the feet looking east.

A coffin is seen through the presence of 26 coffin nails. A cluster of six or more.

**Finds (tick):**
- None
- Pot
- Bone
- Flint
- Stone
- Burnt stone
- Glass
- Metal
- CBM
- Wood
- Leather

**Small Finds:**
- 3398, 3452a/b1, 3489-3500, 3554-60, 3540-1

**Building Materials**

**For full matrix see #1645**

**Recorder:** LN

**Date:** 19/12/04

**Initials:** [Signature]
nails (3461, 3489 - 3491, 3496 - 3497) are all pointing out of the coffin as if they were hammered into the underside of the coffin out (see plan 539). Why this is so when the other nails are pointing upwards is unclear, but one suggestion is that they are supporting an external handle.

Two horn nail shoes 3540 + 3541 were found beneath the feet.

**Interpretation/Discussion**

Group No. for an E-W Juvenile inhumation (1253).

(The skeleton was completely decayed - but must have been less than 120-125?) It was in a coffin defined by 10 nails.

It cut grave 1335 by the S.

No grave goods.

**Finds** (tick): None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ]

---

**Description:**
1. Loose
2. Clay
3. Chalk lump
4. In a reddish brown clay silty matrix
5. 1-10 cm thick
6. Fill of (1373)
7. Excavated by mattock.

**Interpretation/Discussion:**
Fill of grave cut 1333, overlying skeleton (1332). It was cut by grave (1372).
13 nails were found mainly defining the E edge of a coffin.
Nails (3429, 3430) are prob. grave (1373) (2 are prob. residual in grave (1372).)

Soil description (see Context ...331...): redeposited chalk gypsum.

Additional description: nothing survives of the skeleton but the short length of the spine suggests it was juvenile.

Interpretation: prob a juvenile E-W burial but nothing survives of the skeleton. The E end of a coffin was defined by nails. Most of the W half of grave was truncated by (1373) #

**INTERPRETATION/DISCUSSION**

W-E aligned inhumation of adult male aged 50+. Heavily truncated by group 1810, mid-way down thoracic vertebrae. The left arm is flexed at the elbow so that the left hand is located by the left shoulder; although the long-tomes of the right arm have been truncated, the location of the right hand by the right shoulder would suggest a similar posture for the —

**RECODER** RB

**DATE** 18.2.04

**INITIALS**
right arm (see sketch below). No evidence for a coffin was recovered and no grave goods accompanied the burial (at least where not truncated).

A large quantity of choral was recovered from the backfill of Group 1310, some of which undoubtedly belongs to this skeleton. However, 1310 also truncates a grave to the south of 1310/1360 and some of the choral will originate from this grave (unexcavated + un-numbered as at 13-2-04).

Plan No(s): Retified  
Posture: Upper part of body on left side - legs extended

Coffin: Coffin Stain (1319)

Coffin fittings: NAILS 3408 → 3413 3470 → 3483

**Soil description (see Context ...1319...)**

**Additional description**
Head on side facing north. Upper part of body on its left side - left arm extending down the body, right arm extending towards left - hands overlapping. Bones of the legs are very close together especially from the lower femur down to the feet. Vessel (1342) was placed on the left hand side of the skull.

**Soil description (see Context 1346)**

- Ground heavily truncated by modern drainage soakaway. Only feet + lower legs remaining. No evidence for continuation of skeleton under concrete. Bones are those of a Male, but age and sex are hard to determine due to lack of skeleton.

**Interpretation**

Concrete soakaway truncates skeleton.

**Interpretation/Discussion**

Male interment (age 45 years approx). Unusual as skull in left facing. Also the skeleton was in a pose (upside down) position. Coffin nails were found. Skull had been partially truncated by service trench. Otherwise reasonable preservation of skeleton.

**Interpretation/Discussion**

A male inhumation facing W-E, but heavily truncated by a modern drain/soakaway that has left only the lower legs/feet. No other skeletal fragments in grave cut or under the concrete soakaway (as far as can be seen). The grave cut also truncates grave 1276.

Skeleton 1287 was surrounded by possible body sin 1293 see plan 580. The infant was c. 6 months of not within its arm out. There was a difference of 0.12m between the top of the infant & the skull of female skeleton 1341, but the sequence of deposition points to the infant being interred at the same time as skeleton 1341. 1287 was lying on its side head facing south - in a slightly coaxed position. 1341 was had the upper half of her body on its side head facing N.

### Description (See check lists):

- **Ditch Cut**: 1353, 1422
- **Lower Fill**: 1354, 1423
- **Upper Fill**: 1356
- **Section**: 241, 243
- **Plan**: 592, 601
- **Photos**: Films 58 Frames 29-32

### Interpretation/Discussion

Narrow ditch orientated east-west.

Heavily truncated by grave cuts. One of four E-W linear ditches along North End of Site. Likely successive boundary ditches for cemetery.

---

**INTERPRETATION/DISCUSSION**

The deposit, together with the percentage concentration of chalk cleft inclusions, as situated along the length of the ditch base. The density of chalk cleft inclusions suggest the deposit may be derived by deliberate backfilling of the ditch.

Context No. 1355
Young child buried W-E with head turned to S. Buried with a silver belt buckle pin and a bone comb. The belt buckle pin is cruciform. It was found in the teeth area of the very fragmentary skull. The comb was by the left foot. There were also hobnails (see page 2 for further discussion).
Discussion

The belt buckle pin >> buckle pin for buckle fastening perhaps of cloak (buckle lost in antiquity).

>> buckle pin that was re-used as pendant as it was made of precious metal (silver) and decorated.

>> buckle pin was re-used as a pendant because of its unusual shape. It looked like a crucifix. Embracing new and old ideas (the bone comb) in burial practice.

A thin strand of iron material was found in the chest area of the skeleton. This could have been a clothes fastening or it may have been a chain for the pendant.

This grave is later than group 1360 as it had cut the toes off of the right foot of sk (1344).

GRAVE GOODS

AT LEAST EIGHT Cu Alloy and bone bracelets in a stack.

3 Cu Alloy rings amongst the bracelets, 3245 had 3246 (the bracelet) through it.

One Necklace with cylindrical blue and green glass beads of varying sizes. The double-chain linked Cu alloy chain with double-loop links survives with a clasp. It was made of twisted wire.

One bracelet(s) with small blue glass beads and chain with single loops and single strand of wire survived.

Other small beads survived in localised area (on plan 575). Amber beads x 2 survived by stack of bracelets.

All heavily disturbed by roots. Even though stack + necklace appeared to be little disturbed as possible. Hobnails also found.

5) F10-14 Milk
6) Fill of 1372
7) A excavated by mattock.

Interpretation/Discussion
All of Grave cut (1372) overlying skeleton (1371).
It contained a lot of charred (including a skull at
S end of grave) *(The timber is in a lot better condition than
the bones of the skeleton)*

It was cut by a mod pipe-bend & a mod cut
for a manhole at NE edge

Finds (tick): None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ]

Small Finds 3486 3487 3488 3501 3502 3503 3504 3505
3506 3507

Date 18.2.04

Initials CR
The hill contained a pot (1369) + a glass vessel +

(1326) / 3486

+ 7 coins stacked + in a vertical pile surrounded by a
dark silt fill (0.04 - 0.1m). The order of the coins was

Lower - (3502) - (3503) - (3504) - (3505) - (3506) - (3507) - (3508)

they were prob in a leather purse/money bag or maybe a

wooden box.

2 nails were found (3487 - 3488) - which maybe

a vessel - (or maybe a coffin ?)

The hill contained a lot of charred including a

skull which was prob deliberately placed at

end of grave.

Also 1 small hole or pot was found under skull.

**DESCRIPTION (SEE CHECK LISTS):**

- **PLANS:**
  - 479 - COFFIN STAIN AND NAILS (1:20)
  - 571 - GRAVE GOODS - BRACELETS AND COINS
  - 572 - HOSNAILS (1:5)
- **PHOTOS:** RECTIFIED
  - (083)x: 356 / P1010033
  - GENERALS: 357 / P1010038

**INTERPRETATION/DISCUSSION**

INFANT BURIED WITH AT LEAST 6 BRACELETS AND 3 COINS. THE COINS WERE UP ON EDGE IN A ROW AND WERE AMONGST A DARK ORGANIC MATERIAL BELOW THE BRACELETS. THIS COULD POSSIBLY BE EVIDENCE FOR A BOX, AN IRON FIXING MAY HAVE BECOME MIXED WITH THE HOSNAILS.

BURIED IN A COFFIN WITH BRACKETS.

THE MODERN TRENCH HAD CUT AWAY THE FILL TO 2CM ABOVE.

### Description (See check lists):
1. Rectangular
2. Vertical sided, flat base
3. 2.60 x 0.80 x 1.10 (deep)
4. Involved to NE by modern cut (or manhole?)
5. Filled with 1369, 1371, 1374, 1376

#### Interpretation/Discussion

Grave cut for skeleton (1372).

It cuts grave (1334) to the S.

It cuts grave (1533) to the W.

The relationship to (1514) is more problematic (see sheets 1513).

a leather purse/money bag (or possibly a wooden box?). All the coins were hoarding, and were in the following order:

- (3301) (=301)
- 3502
- 3503
- 3504
- 3505
- 3506
- 3507

The fill of the grave (1365) contained a lot of charcoal (including a skull which was prob deliberately placed at s of grave.)

The grave cut Graves (1334) + 1515 # + (1535) #

But see next sheet.
(1373) is one of a series of late N-S graves (c.f. (1440) + (1545)). Its grave goods are similar to those of (1440). They cut E-W graves. The decapitated crouched burial (1515) is prob an exception to a case can be made out for it being a later E-W grave that was dug exactly to 'fit' in between (1440) + (1373) (it was highly crooked & maybe even decapitated to fit the space). This would fit in with the theory of decapitated graves associated with richly furnished graves. If so the matrix would be:

E-W decapitated crouched

(1440) (1373) (1545) N-S graves

(1535) (1334+)

(1400)

401

Sketch plan (not to scale)
A complete pot in cut 1372.

A complete pot in grave CR 1372 (Grave Group 1373)
It was placed to the left of the skull and was found lying on its side (handle downwards).

Finds (tick): None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ]

**Description (See check lists):**

1380 - Grave Cut
1381 - Grave backfill
1382 - Coffin
1383 - Skeleton

---

**No rectified photograph was taken as only fragments of bone survive.**

---

**Interpretation/Discussion**

An *E* aligned inhumation of which only fragmented bone survives. Given depth and dimensions of cut (2.5m x 0.85m x c.1.2m) probably an adult but age & sex indeterminable. Accompanied by coffin comprising 11* in-situ nails (358-18) with two in each corner at the base of the coffin & one in each corner for the lid. Given that the majority of coffins in this area have

"Symmetrically arranged" nails, it is likely that one of the three "re-deposited" nails is from the lid, in the north-west corner of the projected extent of the coffin. The other two are certainly re-deposited (as is the relatively high percentage of charcoal recovered from the backfill) from the graves through which G.1379 is cut (G.1395 + 3 unexcavated as at 19.2). There were also several fragments of what appeared to be a single vessel from within the backfill, perhaps suggesting a funerary vessel has been disturbed + re-deposited.

A Cu Alloy fragment (3519) was also recovered and may be the remnants of a shop-end given its location in the projected area of the pelvis.

- Ditch Gap 460
- Gap 1395: Partially excavated where junction of 1379 makes unstable (Skeletone)
- Gravestones unexcavated as at 19.2.04

**DESCRIPTION (See check list):**

- This context represents a pottery vessel found within the limits of coffin (1367)
- By the left foot of skeleton (1364).
- This coffin is orange with a red glaze with a distinctive pattern characteristic of New Forest ware.

**STRATIGRAPHIC MATRIX**

  1. Materials 2. Size of bricks etc
  2. Finish of stonework
  3. Coursing, bond form, faces
  4. 6. bond & dimensions as found
  5. Nature of stone used

**Interpretation/Discussion**

Grave cut orientated east-west which truncates an earlier grave cut situated immediately to the north. This grave was also truncated significantly into an east-west orientated backfilled ditch situated immediately north. During excavation of the grave the contact horizon between the grave cut/backfill and the ditch was not very clear but in places the grave fill exhibited a later deposition.

### Description (See check list):

- Coffin wood

### Stratigraphic Matrix

```
   1387
this context is 1388
   1488
```

### Interpretation/Discussion

Fragment of coffin wood remaining in situ. Very thin - approximately 0.003 m thickness - with almost veneer-type appearance. Also very fragile and virtually disintegrated upon touching it.

Fragment was photographed in section – Digital No.: S28, S29. 18/2/04

**DESCRIPTION (See check lists):**

1396 - GRAVE CUT
1397 - GRAVE BACKFILL

**NO DIGITAL SHOTS TAKEN.**

**INTERPRETATION/DISCUSSION:**
Heavily truncated grave, partially excavated during excavation of grave 1379 as truncated fills unstable (Ref. Sketch over) - also truncated by unexcavated grave which extends beyond the eastern boundary of site + is to be left

As a result, the remainder of this grave may also be left unexcavated. Where partially excavated

**Finds (Tick):** None Pot Bone Flint Stone Burnt stone Glass Metal CBM Wood Leather

**Recorder:** RB
**Date:** 19/12/94
**Initials:** KB
there was no evidence of in-situ skeletal remains so the upper part of the burial has been completely truncated by G.1379. Some of the charnel from G.1379 undoubtedly originates from this grave.

G.1395 may be left unexcavated as cut by unexcavatable(!) grave.

G.1395 partially excavated as fill unstable where cut by G.1379. No skeletal remains recovered.

**STRATIGRAPHIC MATRIX**

```
1404 --- 1405 --- 1450
```

**Interpretation/Discussion**

Grave, consisting of a poorly preserved skeleton with fairly robust longbones suggestive of a male (but not conclusive). The Epiphyses were fixed suggestive of an adult skeleton in an E-W alignment. In a prone position. 3 coins (alloy coins were found around the skull area, also vessel (see 1450 for details) was found next to the knee joint of the right leg.

**Soil description (see Context 1409):**

Only some skull fragments remain. One cranium frag in on edge of grave - most probably disturbed by machine.

**Interpretation:**

Neonate skull in a W-E orientated coffin.

**Description (See check lists):**

1409 Grave Backfill

1408 Skeleton

1407 Grave Cut

**Digital**: 548/2200060

**Interpretation/Discussion**: This group consists of a neo-nate skeleton in a coffin in a W-E grave cut. The skeleton is in a very poor condition, only some cranial fragments and some teeth remain. The presence of a coffin is seen by the eight coffin nails.

- Recorder: RB
- Date: 20/2/04
- Initials
of the cut (i.e. fixing nails for base)
(410 = 3592, 3593, 3596 + 3599).

Hobnailed footwear was worn on the feet at the time of interment (ref. H/nails 3602) but as the feet were crossed no distinction could be made between L + R.

The NE corner of the grave was truncated by group 1379. The SE corner upper fill in the SE corner by group 1340.

The grave truncates hedgerow group 460 and group 1431 together with the surviving NW corner of an as yet unexcavated grave.

The fact that the right 1/2 of the pelvis is badly deteriorated (as opposed to the left 1/2) may suggest something organic was held in the right hand which rests on the pelvis at this point?...??*

NB. Coffin & skeleton aligned NW–SE within the grave cut (i.e. sketch inaccurate)

Truncation by G. 1379

**Description (See check list):**

1. E-W aligned linear @ straight angled  
   Sides 1 75° with flat break to  
   flat base. 2. 15m x 0.36m wide x  
   0.24m deep. 3. No truncations noted. In Reason cleaned for Plan 611.  
   4. [425].

**Interpretation/Discussion**

E-W Northern boundary ditch... GRP 1318

Nailing from S to N, this is 3rd ditch GRP.  
Depleted a continued expansion north of the Cemetery.

**Description (See check lists):**

THIS (CX) IS FOR DITCH GROUP:

\[(1427) = (1432) = (1434)\]

\[(1447) = (1448)\]

\[1426 = 1431 = 1433\]

8. 243 244 245

See Add Sheet CX 1420

For Region's Group Matrix.

**Interpretation/Discussion:**

THIS GROUP IS FOR AN E-W ALIGNED DITCH RUNNING ALONG THE NORTHERN EXTENT OF CEMETERY. NORTHERN MOST OF FOUR PARALLEL DITCHES SUGGESTING IT TO BE THE LAST PHASE OF CEMETERY GRANSON. THE WESTERN TERMINUS WAS REVEALED WHILE EXC. AN ARBITRARY SLOT.

A SECOND SLOT WAS EXC TO THE EAST TO HELP ESTABLISH CONTINUITY OF THE FEATURES. SEE PLAN 611 1 sec's 143,244,245.

ARE THESE EXPANSIONS OR RE-CUT BOUNDARIES? (R3 24.8.04)

Interpretation/Discussion

Fill of grave cut overlying skeleton (1444) + associated
grave goods (1443) + (1444). It contained frag of pot +
none channel (prob tom grave loc E).

It contained 10 cloth nails (3616, 3617, 3620, 3631, 3632, 3633, 3634, 3643, 3646).

Also present were 5 coins (3620/3627/3628/3629/3630).

Description (See check lists):

Group No.:

Cut 4427

Skel (1441)

Fill (1439)

+ pot (1443) + glass vessel (1444)/(3661)

5 coins: (3626) → (3629).

+ a coffin defined by 12 nails.

N-S aligned (head at N), skel. is in very poor condition

Interpretation/Discussion

Grave Group M. for a N-S adult spine, extended inhuman
(1441) in grave cut (1443) + fill (1439). It was in a
coffin defined by 12 nails. The skeleton was in a
poor condition (only legs + top of skull survives). A
pot (1443) was placed to the R of the skull (it was
almost vertical) + was prob. in the coffin. A glass vessel
(1444)/(3661) was placed to the L of the skull.

Samples

Building Materials
A stack of 5 coins (3626 → 6629) was found above the L side of chest/L arm area. The coins were prob in a purse/money bag as all 5 coins were adjacent to each other.

The grave is very similar to grave group 1373 (→ is parallel to it). Both graves are prob 5th graves that cut the earlier E-W graves.

The relationship with 1555 to the S was damaged by a mod pipe trench.

No digital shots were taken as no skeletal remains survive in-situ.

**Interpretation/Discussion**

Meaning truncated? We aligned grave. Truncated by groups 1340, 1379 + 1412. No skeletal remains have survived the truncation in-situ although it is likely that some of the charnal recovered from the backfill of the truncating graves originated from this grave.

**Initials** KB
It is possible that group 1460 represents the western extent of this grave although this cannot be verified and it is equally likely to be a separate grave (there is also about 0 m difference between the base of the two groups). Ref: 1460 - The backfill did appear to comprise an element of re-deposited hedgegrove fill which would suggest that this grave originally truncated the hedgegrove which A.1460 does not, suggesting they are separate graves.

This is probably the eastern end of grave 1460.

### DESCRIPTION (See check lists):

1. Friable
2. Light greyish brown
3. Chalky silt
4. Chalk lumps
70%
5. Thickness 0.60m
approx 6. Length 2.20m, width 0.85m, approx

8. By hand/Sunny

### Interpretation/Discussion

Backfill of Romano grave. Presence of animal tooth in backfill may represent goods lost as offering; however, tooth was clearly outside the coffin so it may be the last offering from the grave digger's lunch.

**Description (See check lists):**

- 1461 - Grave Cut
- 1462 - Backfill
- 1463 - "Skeleton"

**STRATIGRAPHIC MATRIX**

**Interpretation/Discussion**

Heavily truncated grave of sub-adult of indeterminate age & gender. Possibly the same grave as group 1451 although appears to be 'returning' where truncated by group 1412 which would suggest otherwise (see sketch over).

The eastern end of this grave has been mis-recorded as a separate feature, grave 1451

**Description (See check lists):**

- 1465 - GRAVE CUT
- 1466 - BACKFILL
- 1467 - NEONATE SKELETON

**Rectified Digital Photo: 559/P1010035**

(geo-ref pts: 1091-1094)

**Interpretation/Discussion**

Roughly NW-SE aligned inhumations of neonate aged 0-3 months. No accompanying coffin or grave goods. Legs extended in supine, torso resting on left arm (ref. sketch over). Skull missing, presumably truncated by Cap. 1336 (although 4.1336 is c. 0.08m shallower).

#### Description (See check lists):

1. Sub - rectangular
2. Flat base Steep/vertical sides
3. 2.50m length x 0.70m Width x 0.80m depth
4. Truncated by 1386. Truncates 1511

**Truncates Dutch - Group 1352**

#### Interpretation/Discussion

Regular shaped grave cut that truncates an earlier grave but only to the depth of not disturbing the earlier burial: Group 1510. A later grave cut (1386) truncates this grave along the northeast quadrant by approximately 0.80m.

6. approx 2.5m x 0.9m

**Interpretation/Discussion**

Grave backfill. This deposit contained a lot of human charnel, burnt bone, pottery sherds and unsharpened flint nails. Grave 1487 cut through both grave 1489 and cremation at 11625, so these finds are assumed to be disturbed from these features.

Thirteen coffin nails.
The grave has been truncated at its NE corner by grave 11487. Due to the poor condition it is impossible to tell if the skeleton was damaged, but the lack of nails suggests so. It is also possible that a hobnail shoe was disturbed as only one was found within the grave - 3804.

**Description (See check lists):**

This CTX is referencing a complete Pot recovered from Grave Cut 1492 located S.E. of skull for Sx. (1493). Coffin nails were located around it suggesting the pot was placed within the coffin.

**Interpretation/Discussion**

Black ware no obvious decoration. Burred for transport.

Funerary vessel included with interment of Sx (1493).

Part of GRP 1495.

**Description (See check lists):**

Group # for rectangular grave N-E on long axis comprising:

1499 Backfill
1498 Skeleton
1497 Grave Cut

**Interpretation/Discussion**

Grave was cut from the West - v. square. W. sides slightly more rounded E. sides. Contained a male 45-50y.
Skelton within a coffin - no stain survived but nails in butt.
Photos: DIGI 0579 Plans: 644 + 645
Sur film 63
Samples: 1221 - 1225

**THE SKELETON IS WE, CROUCHED & DECAPITATED WITH THE SKULL BETWEEN THE LEGS. NO EVIDENCE FOR A COFFIN. NO GRAVE GOODS. DIGITAL: 582/PC240006 - 584/PC24008**

**Interpretation/Discussion**
Grave group for a late adult male (?) crouched inhumation (1517) that has been decapitated & the head (7 mandible & 1 vertebra) placed between the legs. The legs are very tightly flexed. (The left leg has possibly been hid). No evidence for a coffin. No associated finds. It could have been cut off, or it appears that the grave has been cut at either end.

end by 2 parallel N-S graves 1440+1373. But it
seems strange that the skeleton (1517) is complete +
fits exactly between the 2 graves (all the vertebrae are
accounted for). It is possible that the vertical cols at
either end in fact go the other way and that (1517)
is the later grave & has been dug to 'fit' in between
the 2 graves, (which may explain why the body is crowded
- to fit into the small grave). If so then graves 1440+
1373 were visible as mounds or were other ways marked
when (1517) was dug. Why? The report for the 1960's
excavation claimed that their 7 decapitated graves were
associated with nearby richly furnished graves or ritually unusual
graves. Both 1440+1373 are richly furnished + being
N-S are at variance with the general E-W alignment of
the cemetery. Is (1517) 'associated' with them?

1515, 1533 prob male aged 50+

It appears that the cut has been truncated at either end by parallel N-S graves (1440) + (1373) but surprisingly none of the skeleton is missing. It may be that the cut has been dug later to 'fit' in between the 2 graves. That the vertical cut at either end goes the other way (1516) is the later grave. (See grave sheet for possible explanation.)

Co-ordinates: -
Section No(s): -
Samples: 1218
Soil description (see Context 1545): redeposited chalk (unr)

Additional description:
Body supine. Body has turned through 90°, legs are highly flexed. L leg has completely turned back on itself. L arm is flexed. R arm is stretched. Skull has been decapitated and placed over feet. T. between ankle and tibia, R leg.

Interpretation:
Adult male. Crouched inhumation. No coffin. It has been decapitated and the skull and mandible placed between ankle and thigh of R leg.
The grave has been truncated to E + W by 1440 + 1373.

Checked by: 
Date: 
Amended by: 
Date: 
(1517) is a w-e crouched inhumation. The body is supine with the
waist twisted through 90°. The L arm is bent 90°. The
R arm is straight + underlies pelvis + legs (the arm is
twisted so that the palm is uppermost). The L leg is
tightly bent (by it been held together). The R Leg is
more flexed.) The head (+ mandible + 4 vertebra) has
been decapitated + has been placed between the R ankle
+ R thigh (it overlies the ankle). The skull is placed upright facing
its E & has been crossed - possibly it may have been truncated by 2 parallel N-S
gates (1440 + 1373) but all the bones (+ all the
vertebra) are present + it may be (that the relationship
is the other way round + that grave cut 1516 was cut
to hit the space between the 2 graves (which may explain
why the skeleton is crouched) (see Grave sheet)
There was no evidence for a coffin, no grave goods.

**Description (See check lists):**

- Too highly truncated to be sure, but **edges straight** - possibly square or rectangular.
- Flat bottom as far as known.
- 0.80m x 0.30m max as extant. 4.9cm^3_Deep.
- See plans 646/647.
- Truncated by 1526.
- Filled with (1526).

**Interpretation/Discussion**

HEAVILY TRUNCATED CUT CONTAINING CREMATION MATERIAL.

MATERIAL SAMPLED UNDER No (1236).

It appears likely that this cremation is extremely early and may predate the main pit in this area. It is truncated by pit 1645.

**Description (See check lists):**
1. **Loose Consolidation**
2. **Dark Brown / Black**
3. **Cremated Material**
4. **Burnt Bone, Pot, Coffin Nail**
5. **4.9 cm² deep**
6. **0.80m by 0.30m max as extant**
7. **Highly Truncated Cremation Deposit**

**Interpretation/Discussion**

Cremation Deposit — Very little survival of this deposit — it is truncated by grave [1217], which cuts it down in size spatially, also truncated in depth by large pit [1645].

**Initials**

**Building Materials**
elbows so that the hands cross over the right pelvis. Legs cross approx. 3/4 of the way down the tibiae/fibulae. Hyoid bone survives.

No accompanying grave goods or hotnails.
The eastern end of the grave is truncated by a later grave group which cannot be excavated as it extends beyond the eastern edge of site.

Backfill very loose throughout and roots proliferate, particularly at base of cut and around skeleton.

Perhaps a combination of loose backfill, coffin, and considerable depth (~1.43m) of cut has contributed to good preservation, although burials of similar depth have not survived as well (ie group 1379). The fact that c.0.1m of soil underlies the skeleton may be significant. (ie body liquor settles beneath skeleton so no efflorescence bones???)

```

**Interpretation/Discussion**

Grave Group for an E-W inhumation.

It consists of cut (1534) + fill (1533).

There was no skeleton (pros decayed). The W end of
a coffin was defined by 6 nails.

The grave was truncated to the E by grave
(1373) + by the cut for a modern manhole.

The channel in fill (1369) may be from this grave.

**Description (See check lists):**

**THIS TX IS FOR GRAVE GROUP:**

[1537] only N½ survives truncation  
sk (1538) only top of skull survives  
Fill (1539) Heavily truncated.

**Finds:** Coffin Nails 3805-07  
Samples: 1258 4405  
DIGI shot 604-PC250029.

**Interpretation/Discussion:**

N-S assigned Grave Group sk (1538)  
Heavily truncated away by modern Sack Away + Drain  
Network.

#### Description (See check lists):
1. Loosely Consolidated
2. White / Grey / Brown
3. Chalk Natural / Subsoil / Pit Fills (Re-deposited)
4. Charcoal Bone (Predominantly Animal)
5. 0.48 m thick
6. 1.28 m by 0.56 m
7. The base of this backfill has been sampled as one due to lack of skeleton.

#### Interpretation/Discussion

Backfill of Grave [1541] — This backfill is a mixture of natural chalk, subsoil, and redeposited pit fills from the pit through which the grave is cut. Charcoal bone is evident within this deposit, however also discovered was the skull of a horse. This does not appear to be residual due to the fact that it is mainly intact and only just fits within the grave cut suggesting strongly that it has been intentionally placed within the grave. A coin was also retrieved from this deposit.

#### Finds (tick):

DESCRIPTION (See check lists):

Grave group No.
It consists of:
- Cut 1556
- Skeleton 1557
- Fill 1558

It was heavily truncated by a MOD pipe trench.
There was no evidence for a coffin.
No grave goods

DIGITAL: 606/P26003

INTERPRETATION/DISCUSSION

Grave Group No. for an E-W Adult, Female interment
No evidence for a coffin, No grave goods.
Relationship with grave 1440, was damaged by
a MOD pipe trench (which truncated most of the
grave).

FINDS (tick): None[ ] Pot[ ] Bone[ ] Flint[ ] Stone[ ] Burnt stone[ ] Glass[ ] Metal[ ]

ADULT SKELETON RECORD

SITE CODE: T21
Fill of: 1558
Orientation: E-W (Head at W)
Condition: Upper body - Poor, legs - Fair
Posture: Supine, Extended
Coffin: No Evidence

Context No.: 1557

ADDITIONAL SHEETS:
Associated SF number(s): ~
Age: 30-35
Sex: Female
Samples: 1264, 1265, 1266, 1267

Soil description (see Context 1556): redeposited chalk lenses.

Additional description:
Adult female, E-W (head at W) supine, extended. It has mainly been truncated by a mod pipe trench.

Interpretation:
Adult female, E-W supine, inhumation. Not in a coffin. It has been heavily truncated by a mod pipe.

No grave goods.

```
of the skull. It seems likely that the vessel was placed on top of the coffin given its position (base up) and relative height (the base level with the skull) which suggests it has fallen from an upright position over the skull (ref: digi-photos).

One of several infant/neonate burials in this area (ref: grits 1336, 1305, 1464, 1130 et) perhaps suggesting a deliberate segregation?

All the child graves appear to be truncated by later adult inhumations, suggesting this segregation may have only occurred for a short period??

#### Interpretation/Discussion

**This W-E Grave truncated earlier W-E Grave Group 1575.**

**And in turn was impacted by a modern soak away to the West.**

**Only E½ survives with legs & feet of skull. All that's intact.**

**Six large coffin nails with diamond shaped heads were recovered from foot end of inhumation.**

This context is 1571

1569

1567

Interpretation/Discussion:

Fill of 1568, part of group 1570.

Description (See check lists):

2. 2'07. SMALLE CHALK FLECKS (0.01 - 0.05m dia)
   DARK BLACK LOAMY DEPOSITS LEACHING
3. Down along the line of the ceramic drain pipe that truncated this fill
   (also stained lower R of L #5) @ 1.17m Thick @ 14m (E) x 10m (W)
3. Heavily truncated by modern backfills.
4. MATTACE + SHAVEL / COLD, WET, FROZEN. SPOILS OF SUM.

**Context Type:** Deposit / Cut / Structure

**Overlain by:** 400

**Abutted by:**

**Cut by:**

**Filled by:**

**Part of:** Grave Group (1540)

**Consists of:**

**Overlies:** 1588

**Description (See check lists):**

1) 100x2
2) White
3) Chalk lump
4) 
5) 1.60 - H Old
6) Fill of 1589
7) Excavated by Antecol.

**Interpretation/Discussion**

Fill of grave cut 1589 overlies skeleton 1588.

It was heavily truncated to the S by a modern pipe trench.

It contained: 14 cotton nails

Shale spindle whorl (3923) by lower left leg of skeleton.

Honestails (3921) in NE corner of grave (outside of coffin).

**Description (See check lists):**

Pot discovered sitting upside down on top of the backfill of grave [1619] - The pot appears placed and lies within deposit 1696. 1696 is an unusual deposit in that it exist in section as a convex profile and may represent a possible grave mound - (it exists as a deposit only above the backfill of grave [1619] - is it possible that the pot was placed on top of the grave prior to the erection of a grave mound?

</table>
Part of left pelvis and femur found in grave cut (1596). It was first thought to have been part of a previous skeleton cut through by 1596, but later it appeared to be part of skeleton (1598). It appears that when grave cut (1596) was cut through by Grave Group 52, part of the fill (1597) collapsed into Grave 52 – this contained the left pelvis + femur – which appears to have been pushed back into the coffin cavity of Group 1599, as it was found (pelvis) to be upside down and higher up than the rest of sk 1598. (See additional sheet for diagram.)
Grp 1599

Left femur and left pelvis higher up in cell or:

1596

Collapse of sides due to Grp 52 being cut through leading to left pelvis and femur collapsing in Grp 52. A cavity may still have existed due to coffin and the left pelvis and femur were simply pushed back (upside down) into grave cut.

STRATIGRAPHIC MATRIX

Digital Shots
628/92030013 (GENERAL)
629/92030014 (RECTIFIED)

Interpretation/Discussion
W-E aligned inhumation of adult male aged 50+. Accompanied by coffin comprising 8 fixing nails (2 in each corner) - differs from other coffins in the vicinity as no nails recovered from above the level of the skeleton.
The majority of the graves cutting the ditch contained coffins comprising x12 iron nails.

Finds (tick): None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ] CBM [ ] Wood [ ] Leather [ ]

Small Finds
394.5 - 5.2 (Fe nails) 4005.8 (Fe nails) 4009 (?wooded bone)

Initials RB
8 fixing the base and four outlining the skeleton which are presumed to have fixed the lid. No "lid fixing nails" were recovered from this grave.

However, 4 anomalous nails were recovered from within the projected extent of the coffin underlying the skeleton. It is highly unlikely that these 4 nails (4005 - 4008) are directly associated with the construction of the coffin as their distribution and location beneath the skeleton, together with the fact that they are not complete nails (eg. 4008 is a tip only) would suggest another function (cf. Paul Booth for significance of seemingly randomly placed nails).

A fragment of potentially worked bone (4009)
was also recovered from the general backfill, but was not directly associated with the burial itself.

This grave also slightly overlaps with a previously excavated grave (G.1523), the relationship with which is unclear.

**Recorder** RW  
**Date** 03/03/04  
**Initials**
This is for Goose Group:

[1614] - truncated by modern soakaway on eastern end.

[1616] - Poor condition, Female (FS-5060) juvenile, head to west, facing north. No grave goods.

(1617) - Fill with distinct coffin stain depicted in P.678.

SFs: Coffin nails - 3948 + 3815 + 3813

Samples: 1614 head, 1305 neck, 1305 chest, 1306 Abs, 1808 feet.

Interpretation/Discussion:

DIGI SHOT # 630 - PROB0018.

(1617) - fill with distinct coffin stain depicted in P.678.

Samples: 1614 head, 1305 neck, 1305 chest, 1306 Abs, 1808 feet.

(1614)

(1615)

(1616)

(1617)

(1618)

Disturbed - Coffin nails recovered from higher up in fill. Along with darkness + looseness of fill (1617) suggest some kind of disturbance to grave. Yet skele + coffin stain still intact.

GRAVE GROUP FOR DISCREET W-E GRAVE, TRUNCATED BY MODERN SOAKAWAY TO THE EAST.

**Description (See check lists):**

- Very loose @ Mid Brown @ Silty Sand.
- 25-30% Small Chalk Grains (0.01-0.05m dia).
- Occasional Large Flint Nodules (0.10-0.25m).
- 0.12m thick @ 2.24m l (Surviving) x 0.88m wide.
- This fill looked / felt to be previously excavated. There were several flint nails recovered through out the upper fill, well above the sheep deposit. Yet an absence of any charnel in the deposit doesn't lend itself to how this feature was disturbed, or where the upper nails came from.

**Description (See check lists):**

Finds Ref for finds from a mud pipe trench (see addsheet 1540 for location).

It contained a sherd of pot and some charcoal.

**Interpretation/Discussion**

Finds Ref for finds from a mud pipe trench (the trench cuts through grave 1540* + 1635** + 1693*).

The base of another (pot base) is just from 1 of the disturbed earlier graves.

**Description (See check lists):**

- **Cremation deposit**

12 cm max - although highly variable

- 0.94 x 1.00 m approx.

Sampled in two spots - Top 1446 Bottom 1447

**Interpretation/Discussion**

Cremation deposit

Recorded on site as filling a cut (1695) and being an un-touched cremation burial, but appears from sec 255 to be a layer in the top of pit 2062. Also, is likely to be cut by 1619. 1619 26/3/69

**Interpretation/Discussion**

1629 is a possible turf line or sealing deposit which may record many features on site, including several graves — This would suggest that if it was a turf line, a gap in the use of this area had been witnessed — enough time for a turf line to develop — before other features were excavated on site. This deposit is the same as deposit 1655.

### SITE NAME

- Completeness: only fragments of skull survive
- Condition: Very poor
- Posture: supine?
- Coffin: defined by 6 nails
- Coffin fittings:  |

### ADDITIONAL SHEETS

- Associated SF number(s): 1633
- Age: adult?
- Sex: —
- Samples: 1346

### Soil description (see Context 1633)

-redeposited chalk lumps

### Additional description

-only fragments of skull survive at N end of grave.

### Interpretation

-N-S adult? information in a coffin. It has been heavily truncated by mod services

### Grave Group (1633)

-[Diagram of skeleton with notes]

- Truncated by mod service head

### Stratigraphic Relationships

| 1633 | 1634 |

- this context is 1634

### Excavation methods, lighting, conditions

-Dry & sunny

---

**Description (See check lists):**

**Grave group no.**

- **context of N-S cut 1636**
  - Skel 1634
  - Fll (1633)

**The skeleton was in very poor condition (only fragments of skull & teeth survive - at N end).**

**6 nails defined on coffin**

**No grave goods.**

---

**Interpretation/Discussion**

A N-S (head at N) adult skeleton in a coffin (defined by nails). Only parts of the skull survive.

The grave has been heavily truncated by modern service pipes. The N end of coffin appears to have survived the truncation.

**No grave goods.**

---

**Finds (tick):** None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ] CBM [ ] Wood [ ] Leather [ ]

**Sex:** Male

**Samples:** 1307 - 1312

**Co-Ordinates:** 644 - 647

---

**Soil description:** (see Context 1642)

Wooden coffin

Supine extended position of large adult male within coffin.

Large arm and feet of both legs pointing to the R. The L leg is in normal anatomical position, but the R leg is unusually rotated at the hip, such that the knee faces medially & the R foot facing C. The arms are extended & body lies alongside R femur. The L arm is flexed at elbow & the hands overlap the pelvis & groin area.

640/2040031

639/2040030

**Film 68**

**Recorder**

**Date** 3/3/04

**Initials** 68

**Excavation Method:** Traversed in dry, cool conditions
The (C) hand lay palm upwards and held three Cullaby round (405 - 8017). The green staining on the distal and intermediate phalanges indicate that the reins were in the hand for some time - probably part of burial rite.

**Osteology**
- Sex: Procerous browridges (O²), thick zygomatic (O²), blunt eye orbits (O²), long straight maxillary (O²)
- Mandible: Square gonial angle (O²), deep anterior symphysis (O²), greater
- Pelvis: V-shaped narrow sacral notch (O²), pre-auricular surface about
- Narrow sacral crest (O²), auricular surface not raised (O²)
- Large pelvis, robust (O²) with marked muscle attachments.
- Age: Ectocranial closure.

**Pathology**
- Fused 8.5 S1
- Exaggerated posterior curvature of sacrum in relation to lumbar spine.
- Osteophytes on lumbar.
- Sacral calcification + caries.

**Humerus** (femur + tibia):
- Femur = 53 cm
- Tibia = 44.3 cm
- Sacrum = 188.8 cm (74.5" - 6 ft 2"

### Interpretation/Discussion

The western part of the fill was disturbed and probably filling cutting features to the west. However the boundary was less easy to ascertain. Charnal bone found on the upper levels of this fill.

### Finds

- (tick): None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ]
- CBM [ ] Wood [ ] Leather [ ]
- Small Finds:
  - Captured Nails - 4010, 4010, 4011, 4014, 4015, 4016, 4017, 4018, 4019, 4020, 4021, 4022
  - Knife - 4035, 4036, 4037, 4038, 4039, 4040, 4041, 4042

### Samples

- 1389 - 1392

### Building Materials

**STRATIGRAPHIC MATRIX**
- [Diagram showing stratigraphic relationships]

**DESCRIPTION:**

- **Sub-rounded or oval in plan**
- **Flat base - shallow to moderate concave sides**
- **Full dimensions unknown - depth = 0.50 m**
- **See section 256 and plan**
- **Truncated by GBPs 1295 and 1301**
- **1646 - 1655**

**INTERPRETATION/DISCUSSION**

**Pit** - Full extent unknown and relationship with pit [1623] unknown - it appears probable that this pit was truncated by pit [1623] however there is only circumstantial evidence to back this up.

**FINDS**

**DESCRIPTION (See check lists):**

Grave Group:

- 4 (possibly 5) cut 1669
- skel 1668
- no fill (it was overlain by mod. concrete 1667)

Only lower R leg & part of foot survives.
A nail (4012) was found by the leg.

**INTERPRETATION/DISCUSSION**

Grave Group No. for E-W inhumation found under modern concrete (1667). Possibly in a coffin (defined by 1 nail). Only part of lower R leg survives.

* Most of the concrete was left in situ (too difficult to remove) but it is unlikely any more of the skeleton survives as concrete deepens to N + W (where another service

| 1671 |
| 1661 |

| Recorder: RB |
| Date: 12.3.04 |
| Initials: |

**NB:** As it stands the interpretation of these features runs thus - Pit cuts top fill of ditch and is in turn cut by grave. However, if the interpretation —
of the top ditch fill as upcast from the graves is correct this is not possible.

An alternative is that the pit actually cut the upper fill of grave group 1175 and post-dates it. This argument is strengthened by the fact that the pit almost certainly did truncate neonate grave group 1719.

ref. 27 # Sect. 271.

(The relationship between the "upcast" grave backfill and the pit was difficult to establish in plan - may have been mis-interpreted prior to the initial excavation of the grave.)

**Recorder**: RB  
**Date**: 12.3.04  
**Initials**: RB
The majority of this pit has been truncated by a series of graves and later pits. It is therefore hard to ascertain dimensions, shape in plan or profiles. From the sections in which it does appear it seems to be circular and approx. 0.1m deep. This may seem very shallow for a pit, but within the area a number of shallow pits have been located. This pit is the second pit in a series of four (11261 - 1674 - 1678 - 11680).

For full matrix see 11645

**Recorder**: LN  
**Date**: 31/3/04  
**Initials**: CB
The majority of this pit has been truncated by a series of graves. It is therefore hard to ascertain dimensions, shape in plan or profiles. From the sections in which it does appear it seems to be circular and approx 1.2m deep.

This pit is the third in a series of four shallow pits in the area.

**this context is 1692**

---

**Interpretation/Discussion**

Prob a grave cut (it has been heavily truncated by mod services & little survives)

No skeleton survived.

I nail was found on the fill.

Due to its size it is possibly a child's grave but the E end has been destroyed by mod services & its true size is not clear.

Description (See check lists):
Grave Group
It consists of cut 1692
Fill 1691.

No skeleton survives.

It may have a coffin (defined by 1 nail).
It has been heavily truncated to the N + E by modern services.

Interpretation/Discussion
Grave group no. for a heavily truncated E-W grave.
No skeleton survives. 1 nail may have been from a coffin.

Very little survives.

### STRATIGRAPHIC MATRIX

| 1628 | 1620 | 1695 |

This context is 1695.

**Interpretation/Discussion:**

Possible cremation cut.

This looks very shallow and irregular, and may well represent simply a dump of material settling within natural depressions in the upper pit fill.

**Description (See check lists):**

- **Loose**
- **Mid Brown / Grey**
- **Clay till**
- **Chalky friable**
- **Max. Thickness 0.13m**

**Interpretation/Discussion:**

This deposit was only noted in section 254 if was seen to be sealing 1620 which is the backfill of grave 16191. Its extent in plan could not be further understood due to truncation by graves on all sides. It is a very homogenous layer directly beneath possible turf line 1629 if was included in the micromorphology + soil column sample of the deposit. Interpreted as a layer accumulated above underlying graves D: surviving later truncation.

**Coffin fittings:** 1601, 1602, 1603, 1605, 1606, 1607

**Soil description:** Dark brown clayey silt, chalk, lumps

**Additional description:** Head had rolled to the right after burial, three coins were found there, probably originally placed in the mouth. Skull had been clipped by an earlier burial cracking it into its separate pieces. Backfill (1660) kept the skull together and in shape. The left lower leg was above the knee. Legs together. Pointed towards SE. The neck towards the head was twisted. Knife (1635)

**Towards the south, as was the upper leg, & case, so slightly conformed the right upper arm and shoulder blade.**

**Description (See check lists):**

1. Linear
2. Concave base - straight sloping sides
3. Remaining deposit approx - 1.0m width x 0.20m thickness
   Potentially 1.50m width x >0.80m depth angular dimensions
4. Truncated by several later grave cuts.

**Interpretation/Discussion**

Scant remains of linear ditch that appears to terminate adjacent to the location of Grave group 1475. This excavated segment shows a regular shaped cut with very straight sloping sides (~45°) and a sharply concaved base. This ditch is likely to be the earliest of the four north boundary cemetery ditches.

**Cut: 1.** shape in plan 2. base/sides/top profile 3. dimension and depth 4. sketch 5. truncation 6. fill nos 7. other comments

**Matrix location:** Relationships uncertain

**Description (See check lists):**

Grave group no 1. It consists of:

- (1706) - grave cut
- (1704) - skeleton
- (1703) - fill

- A coffin was defined by 12 nails.
- A coin (4059) was found near L arm. A shale spindle whorl (4071) was found between the femur. An iron object (4070) was found near R femur. The skeleton was in poor condition.

**Interpretation/Discussion**

Grave group no. 1. For an Ew grave, extended information on the skeleton was in poor condition (only brass at skull & legs survive). A coin was found near L arm. A spindle whorl was found between the femur. It was in a coffin defined by 12 nails.

The grave was truncated to the E by a pipe trench. It was truncated by other pipes but not to the level of the skeleton.

Soil description (see Context 1711...)

Minimal remains of infant-sized individual. Only 2 fragments of toes remaining towards eastern half of grave. The orientation of these bones suggest a W-E orientation & a supine position of the legs at least.

Infant was buried in shallow W-E orientated grave (1708), within a wooden coffin (now decayed) - coffin nails only remaining.

</tbody>
</table>

Excavation methods, lighting, conditions

- Troubled in cool dry conditions
Osteology:

Two incomplete brain remaining. Unable to measure to estimate age due to incompleteness of bone. However, overall size does suggest an infant from 6m - 18m (very roughly) - cannot be aged definitively.

**STRATIGRAPHIC MATRIX**

- This context is

**Digital Photographs:**

- 655/P2060046 (GEN)
- 656/P2060038 (RECT)

**Interpretation/Discussion**

W-E aligned inhumation of neonate aged c. 1 month. Cut ditch group 450 by Grave group 1175 and probably by Pit 11671.

- The southern extent of Pit 11671 is uncertain but the projected extent coincides with the truncation of the lower legs and feet of skeleton (1722) - No coffin or grave goods accompany.

Interpretation/Discussion
N-S aligned inhumation of neo-nate aged 2-3 months. Appears to have been buried in base of ditch group 450 (cut segment 1166) as there is no discernable cut, although the truncation by cremation group 1724 may have removed evidence of a cut from a higher level. Despite this possibility, it seems likely the interment in the

base of the ditch, prior to the initial phase of silting is the more feasible explanation, particularly given the age of the individual, the unusual N-S alignment (ie. aligned with the ditch) and its location at the very base of the ditch.

It is possible that the posture (head resting on upper left arm, body on left side) suggests that the body has been thrown into the ditch but more likely that it has been placed (again suggested by the location in the exact centre of the ditch)?

The legs and pelvis are truncated by cremation group 1724 (ref. sketches)

**Description (See check lists):**

1. Rectangular E-W aligned.
2. Heavy truncated to east.
3. Near west sides + flat base. 3.80m L (W-E) survives truncation x 0.40m W x 0.87m deep.
4. Truncated by [1735], cuts no. 1739.

**Interpretation/Discussion:**

This grave cut is for SK (1738) GKP 1740.

**Additional description:**
This skeleton is cut by grave [1735] & 1734. Likely same elements recovered in fill (1738) to be assoc with this truncated skele.

**Interpretation:**
This 20-25 year old male was interred with no coffin, a very slender grave cut was used.

### Description (See check lists):

**This CTX is for Grave Group:**

[1735] - only west 1/2 survives truncation

sk (1738) - 20-25 year old male. No coffin, no grave goods.

Fill (1739) - only west 1/2 survives.

Samples: 1733 head, 1734 neck + 1735 chest.

### Interpretation/Discussion

This group is middle in sequence.

[1740] truncated by GRP 1735

[1738] truncated by GRP 1810

See add sheet CTX 1810 for GRP matrix.

### Description (See check lists):
1. Coarse
2. Flat base — Vertical sides [with one set of] slots
3. 15cm deep — 10 cm² in diameter
4. See Plan 715 and Section 263
5. truncates 1754 and 1753 physically
6. 1744

### Interpretation/Discussion

**Post stone hole**

Post-hole deposit was very dark and appeared to contain burning — Sampled under no. 1358. The shoulder visible in Section 263 may be due to the way the pot was extracted from the hole.

**Digi photo no.** 144/2060008 & 745/20600089

**Description (See check lists):**

1. Dark grey / black crenation material with silt.
2. - 18 cm
3. 10 cm in diameter
4. Sampled as no 1388

**Interpretation/Discussion**

_post-hole deposit._

This deposit has been sampled as no 1388 due to the nature of its makeup, which appears to contain burnt material, which may be part of a crenation deposit.

**Description (See check lists):**

- **This grave group consists of grave cut C16093.**
- **Skeleton (1611); box fill (1612); coffin (1613).**
- **The dimensions of the grave cut are:** 1.15m by 0.6m by 2.4m. The coffin is represented by coffin nails. The skeleton is in poor condition and that can be deduced is that this individual is a young adult lain on his left side in a prone position. (This grave cut through grave group 1610).

---

**Interpretation/Discussion**

Cremation Pit - Part of Cremation Group 1904.

This was not a classic cremation in the sense that it was a sort containing a cremation urn - it is always possible (depending on how much bone is found in their sample) that this is not a primary cremation deposit, but simply a dump of secondary cremation material moved from elsewhere on site and dumped here within the shallow depression of the larger pit.

**Description (See check lists):**

1. **Bright dark black basal deposit of cremation**
2. **Central pit**
3. **Cremated material**
4. **4 cm² max**
5. **0.56 cm² in section**
6. **Deposit sampled under 1387**

**Interpretation/Discussion**

Cremation deposit

Basal deposit of cut containing cremated material. This was the darkestmost distinct deposit within the cut and contained (in appearance) themost cremated bone. — Sampled under no 1387.

Digiphotos 124/1/266003/9.

**Finds** (tick): None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ] CBM [ ] Wood [ ] Leather [ ]

## CONTEXT RECORD

### SITE
AY21

### ADDITIONAL SHEETS:
- Context Type: Deposit / Structure
- Overlain by:
- Abutted by:
- Cut by:
- Filled by: 1631, 1632, 1753, 1754, 1871, 1872
- Same as: 1630
- Consists of:
- Overlies:
- Butts:
- Cuts: 1628 as commemorative deposit 1630
- Fill of:
- Relationships uncertain

### DESCRIPTION (See check lists):
1. Sub-Circular - as far as witnessed
2. Concave base - shallow concave sides
3. Max depth as witnessed
4. See plan 700 - Sections 255 / 263
5. Filled with 1630, 1631, under cut 1630, and 1753, 1871, 1872 and 1754.

### STRATIGRAPHIC MATRIX
- Context No. 1752
- Filled with 1628
- Part of: 1753

### INTERPRETATION/DISCUSION

This cut appears to have been filled with different materials at different points of its extent - recorded in Section 255 it contains deposit 1631-2, which cannot be linked to deposit 1753-4, recorded in Section 263. Similarly deposit 1871-2 recorded by Lucy Fuller also - A heterogenous collection of differing materials appear to have been dumped within this cut.

### FINDS

**DESCRIPTION (See check lists):**

1. 40 cm max - in section
2. 1.86 m - as recorded in section 263
3. Overlaid natural with silt matrix
4. Light yellow in colour
5. -

**INTERPRETATION/DISCUSSION:**

Deposit within cut 1752 = 1630 - This deposit was recorded only in Section 263 and not in the section associated with cut 1630, which has been interpreted as the same cut (Section 255). The fact that the deposits are different at different broad points of pit cut 1752 = 1630 merely suggests different depositional processes were at work at a reduced level.

**DESCRIPTION (See check lists):**

1. Light brown silt, minimal inclusions.
2. -
3. 0.8 cm max in section 263.
4. 0.32 cm max in section 263.
5. Deposit recorded elsewhere by drag.
6. -

**INTERPRETATION/DISCUSSION:**

Upper fill of pit

This deposit was originally recorded in Section 263, and had a relatively simple stratigraphic location. However, it now appears that, although it is in the latest deposit within pit [1752 = 1630], it also covers the cut and fill of another feature [1873] - thus, the sequence may be seen as cut identified in Section 263 then 1753. Then deposits 1874 and 1875 seen in Section 175 - this would have left a depression in the pit which has then at 1875 filled with 1876 and finally filled with this deposit 1754, covering both earlier fills and features 1873.

**Description (See check lists):**

1. Sub-rectangular
2. Flat-base, vertical sides
3. 0.90m width × 2.50m length × 1.30m depth

**Interpretation/Discussion:**

Regular shaped grave cut that truncates the southern edge of a former cemetery boundary ditch. The grave has been truncated at the west end by a modern concrete foundation affecting only the upper fills.

Interpretation/Discussion

Fill at grave cut (1762)

It contained 3 nails (4094, 4095, 4096) - A coffin? It contained pot (1763) + glass vessel (1764) (4090)

It possibly a belt defined by stud (4120), Fe buckle (4142)

Fe attachment (?) ring (4143) + Fe knife (4119).

A coin (4118) was found beneath the studs.

Study in a leather object, possibly a bag or a box but more likely to be a belt. An iron buckle (4142) was found against the grave edge. Also present was an iron hoop ring (4141) suggesting the belt hypothesis is more likely. An iron knife (4119) was nearby (prob was attached to the belt in a sheath). Below one of the belt studs was a copper coin (4148) (was it attached to the belt? in a leather/clout purse?). The belt is clearly placed to the side of the skeleton and was not being worn.

It cuts grave (1840) to the N.
There was no clear relationship to grave (1857) to the S.

DIGI SHOTS: 660/P2090023 - 664/P2090027
(1760) is one of a series of a line of graves running NW from high status grave (1846) (see drawing below). The graves were very close together but they respected each other. The only obvious relationship was that (1760) cut (1840) (but it wasn't deep enough to disturb the skeleton at (1840)).

**Fill of 1762**
- Completeness: only legs + random fragments survive.

**Orientation (N-S (Chamber W))**
- Condition: V. poor
- Posture: supine extended

**Plan No(s) and Co-Ordinates**
- Coffin:
  - defined by 3 nails?
- Coffin fittings

**Soil description (see Context 1759...)**
- Loose redeposited chalk lump.

**Additional descriptions**
- Very tenuous: only long bones of less survive (+ teeth).

**Interpretation**
- Supine extended juvenile inhumation possibly in a coffin
- It was lined with a pot (1763), a glass vessel (1764) and an iron knife + a coin surrounded by iron nails (a box? a shield? a shoe?).

**Grave Group 1760**
- A silver buckle + iron hoop was also found suggesting it was a belt with the knife attached.

**Description (See check lists):**

Finds Ref: For a complete glass vessel in grave cut (1762).

It is vertical and was complete prior to excavation. (It is now 1-3 pieces).

**Interpretation/Discussion:**

A glass vessel in grave cut (1762). It is a form similar to "Clark's" one-handled jug, but has a fluted handle and what looks like a spur half way up its side.

\[=\frac{4090}{70} \]

**STRATIGRAPHIC MATRIX**

This context is 1770

---

**Description (See check lists):**

Black silty cremation material, containing burnt bone, pottery sherds and coffin nails.

Approx 0.85 x 0.4m. Approx 0.13m deep.

---

**Interpretation/Discussion**

This cremation fill was excavated through a series of samples. To begin with 2cm spits were taken over the whole area. However, after the second spit was taken it started to look as if the body retained some anatomical positioning. Due to this...

**Finds (tick):**

- None [ ]
- Pot [ ]
- Bone [ ]
- Flint [ ]
- Stone [ ]
- Burnt stone [ ]
- Glass [ ]
- Metal [ ]

---

**Recorder**: LN

**Date**: 8/3/04

**Initials**: [Signature]
A different sampling strategy was undertaken. The full cremation was divided into four vertical sections, one to encompass the head area, one for the torso, one for the pelvis and one for the legs. This should show us (after processing) if the body was still cremated normal in skeleton position.

Matrix location Relationships uncertain

Description (See check lists):

1. Slightly friable
2. Light brown
3. Silt
4. Patches of burning (approx 2cm²)
5. Approx 0.12m.
6. Approx 0.85 x 0.4m.

Interpretation/Discussion

Layer of silt which overlies a cremation deposit. This as this layer was within the cremation cut and had patches of burnt material within it, it was 100% bulk sampled.

Description (See check lists):
- **Fridtle**
- **Dusk dawn**
- **Grey Silt**
- **Flint nodules are 0.15 x 0.08 40%**
- **0.24m thickness**
- **Pottek**

Interpretation/Discussion:
Upper setting fill of gully: accumulated at the terminal end of the gully and: at a point of access given to I from the cemetery area. The deposit most likely derived from the breakdown of the surrounding topsoil. The number of flint nodules would suggest packing for a post setting - it was only the terminal end which produced this concentration of flint - if so the post had been removed if the flints disposed so there was no sign for post pipe.

1. materials 2. size of bricks etc 3. finish of stones 4. coursing/bond 5. form 6. faces 7. bond 8. dimensions as found 9. other comments

**STRATIGRAPHIC MATRIX**

**Description (See check lists):**  
N-S concave grave cut  
1) Sub-rectangular  
2) Sides irregular but largely vertical  
3) Length = 0.82 m, breadth = 0.46 m, depth = 0.26 m  
4) Heavily truncated by modern W-E pipe trench such that only northernmost corner of grave remains

**Interpretation/Discussion:**  
Sub-rectangular N-S grave  
- heavily truncated

**Finds (tick):**  
- None  
- Pot

**Soil description (see Context 1784...)**

**Additional description**

Heavily truncated grave containing only 1x metasternal on the surface of the grave. Metasternal found towards northern end of grave, probably that individual was lying S-N grave cut by W-E running modern ditch. Much of channel found within this feature is probably from this skeleton.

### DESCRIPTION

This CTX is for Coffin Remnants encountered in (1804) surrounding SK (1802). Abundant nails indicate the extent of Coffin. But as planned in P. 736. Good portion of Ato End (W) survived albeit in tiny broken fragments.

550mm wide with surviving side stains = 10mm (13 nails at W end). Total: 25 Coffin Nails In situ + Several collected as bulk in fill (1804).

The Coffin Wood survived in pieces less than 1cm in size, incredibly fragile so no sample taken.

  - 1647/1644
  - 1643/L632/L61

**Interpretation/Discussion:**
Roman-British grave, cut to the west by a grave excavated in previous seasons. This grave disturbed but did not destroy skeleton 1647, resulting in a cracked but complete skull. Three coins were found both the skull which had rotated to the right after burial, presumably the coins were originally placed on skeleton (1647's) mouth. Beneath the left hand.

**Description (See check lists):**

1771 - Sitting overlying cremation

1770 - Cremation

1769 - Cut

---

**Interpretation/Discussion:**

This is a cremation group consisting of a cut into which a cremation deposit was placed. It seems that the deposit didn't fill the cut completely and that the cut gradually settled up (1771). This implies that the cremation was left.

This context is 1627

**Recorder:** LN  
**Date:** 8/3/04  
**Initials:** RB
open after deposition.

Although it doesn't look like the cremation was actually burnt within it, an excavation did seem that the location of the burnt bone complied with the positioning of a laid out skeleton. However, the open cremation cut was very small in comparison to the size of some of the burnt bone.

Twelve nails were recorded, no coffin nails.

For full matrix see 1/6457

**Description (See check lists):**

1. Predominantly Mid Orange / Brown Sandy Silt with 20% Small Chalk Fragments (c. 0.01m³); 5% Large Chalk Fragments (avg. 0.1m x 0.8m x 0.04m); 5% Flint Nodules. Mixed with patches of re-deposited brown t/soil.
2. E. 0.2m 6.0.9m² x 2m 7 - 8. Matted/travel Pitt.

**Interpretation/Discussion:** Possible upcast from graves cutting through lower ditch deposits. The graves were visible within this deposit but did not appear to actually cut it - the variation between the grave backfill and the remaining upcast being sufficient to identify the graves within the latter (ref. Skefah over).

**Finds (tick):** None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ] CBM [ ] Wood [ ] Leather [ ]

```

*This context is 1822*  

**Interpretation/Discussion**

Although corresponding co-ith (1813) (1812) + (1717) stratigraphically ("grave upper") is actually more similar in composition to "natural siltine" deposits (1869) 1812 + 1865 and possibly represents a similar episode. Unfortunately the relationship between this deposit and the "grave upper" is truncated by pit 1671.

2. Sides slope at approx. 45° to concave base.
3. 1.8m diameter x 0.37m depth
4. — 5. See below 6. As above 7. —

**Interpretation/Discussion**
- Lake Roman pit of uncertain function.
- Initially interpreted as cutting upper ditch fill through grave group 1280. However, if interpretation of upper ditch fill as upcast from graves is correct, this is not possible. It is possible that the pit actually cut the upper backfill of the grave and post-dated it.

Oval
Sides steep 80°, base flat
L 1.10m E-W, 0.6m surviving N-S
D 0.22m depth
Filled by 1828 1829

Shallow pit filled with two distinct deposits with very clear boundaries. The pit appears to be lined by 1828, a homogeneous dark brown clay silt with only small peat/silt inclusions - the function of the pit is unknown - it post-dates the recorded silting episodes of boundary ditch group 450). It may possibly represent the truncated base of a gully feature, but this is unlikely.

**Description (See check lists):**

- Friable
- Dark brown
- Clay Silt
- Occasional grey grit 2%
- Depth 0.4m

**Interpretation/Discussion**

A sandy deposit within pit 1829 appears to be a deliberate deposit lining the pit although the high silt content questions the reason why this would be functional.

**Description (See check lists):**

- **1844**
  - Suits overlying cremation.
- **1843**
  - Cremation material
- **1842**
  - Cut for cremation

**Interpretation/Discussion**

This feature was rectangular in plan and could have been mistaken for an infant inhumation had it not been for a band of charcoal around the edge of the feature. The non burnt material visible in the centre of the feature (1844).

**Finds (tick):**
- None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ]
- CBM [ ] Wood [ ] Leather [ ]

**Small Finds**
- 4172 - 4177, 4209 - 4213

**Samples**
- 1427 - 1431

**Building Materials**

**Recorder** LN

**Date** 9/3/04

**Initials**
Was bulk sampled, (1427). After this deposit was removed the remaining deposits were of a high charcoal content with less burnt bone than was expected. It was also deposited in a strange layout with charcoal vertically lining the cremation cut, and nails protruding from the highest parts of this charcoal. This, in addition to there being burnt soil around the top of the feature, but not the bottom - may suggest that this was actually a pyre.

For full matrix see [1645]

Sketch pre ex plan

**Coffin:** Clear coffin stain (1849)

**Coffin fittings:** Fe Nails

**Soil description:** Extremely badly decayed skeleton of an adult lying E - W within grave. Clear coffin stain (1849). Able to distinguish the outline of the mandible. Recovered several teeth. Small skull fragments identified, also upper humeral scapula (R). Small fragments of ribs & femur (L). Pelvis recovered adjacent to crossbow breech (4190). The soil to excavation is composed of small very loose crumbs of bone which had been collected as samples according to suggested parts of the body.

**Excavation methods, lighting, conditions:** Traversed in cool dry conditions.
are projected to biology. It is unlikely that much info. will be extracted from bone fragments, but the teeth from which an age estimation should be possible.

**Grave goods:** A Cu alloy object was recovered from the neck/shoulder area, apparently in the position it would have been held, then worn as a close-set fastening at time of burial. It overlay a small area of degraded black organic material (textile), that has been collected (1482) for analysis.

A second Cu alloy object was found at the foot of the grave, immediately within the limit of the coffin area. The function of this object (4214) is not understood but may have been a boat decoration, or possibly even the footer for a bag/scroll.

Certainly it was attached to a fragment of dense organic material on the reverse (textile). A matching object was denoted "together" which was attached to the leather were found on the underside / facing downwards.

This was also the case with 4243, where the stain from the organic material was beneath, but not above the copper alloy object.
found alongside (8) knee (4243). It was underlain by dark organic material also but this was less well preserved than the leather from 4214a. There was no wooden grain in backfill (1850) extending between the two Cu alloy deposits to suggest that they were part of a single object — although this may be a differential preservation factor or just an artefact of excavation.

Two silver fittings (buckle 4266, strap end 4236) were found between the legs of the skeleton. From the position of the buckle it seems clear that the individual was not wearing the belt at time of burial (unlike the other brooch) — more a grave good deposit.

**Description (See check lists):**

---

**INTERPRETATION/DISCUSSION**

FINDS REFERENCE N° 1851 → Generalised due to the discovery of a coin 1420s in an on-site context.

Grave [487] was excavated first and then partially backfilled - this backfill was then removed at the same time as excavated the on-site backfill from grave [1619]. The coin appeared in a location which was inside the extent of [487] and thus may have come from backfill of [1619] or existing material in [487].

**Finds (tick):** None [ ] Pot [ ] Bone [ ] Flint [ ] Stone [ ] Burnt stone [ ] Glass [ ] Metal [ ] CBM [ ] Wood [ ] Leather [ ]

Co Alloy rings were worn on a ?Metacarpal of the left hand.

The cat only just accommodates the skeleton which probably accounts for the degree of movement of some of the bones (i.e. skull + upper left arm/ hand) ??

N.B.: It is possible that bone bracelet 4270 is actually two bracelets but this was not apparent until the skeleton was lifted as the bracelet(s) was/were fragmented.

**Description (See check lists):**

**Grave group no.**

1) consists of cut 1883  
Skel (1832)  
Fill (1887)

**Stratigraphic Matrix:**

- 400
- 1884

---

A coffin was defined by 9 nails 4276 (4277 4278)

4275 (4280) 4281 (4286 4287 4288)

The E end of the grave was truncated by a mod manhole.

**Interpretation/Discussion**

Grave group no. for a W/E (head north) adult male inhumation in a coffin (defined by 9 nails).

The skeleton was lying on its L-side facing the N with its arms flexed. No grave goods.

The E end of grave was truncated by a mod manhole. There was no clear relationship.

**Soil description (see Context 1889...)**

Simple adult inhumation placed W-E i.e., supine & extended within wooden coffin. Bone condition exceedingly poor with only cranial vault & fragments of O & R tibial shafts surviving. Intergration The feet of 1887 has been truncated away by modern pipeline. Face was facing S; position of arms could not be determined (not preserved); feet appear to have been together; legs extended.

Soil description (see Context 1903)

Additional description:

Arms folded across abdomen - lower part of legs & feet close together - no nails around feet appear to have worn shoes. Left hand side ribs do not survive - nor do the upper vertebrae. Skeleton in poor condition but sitting directly on the bedrock - no backfill material beneath.

Matrix location Relationships uncertain

Description (See check lists):

Stratigraphic Matrix

1629 = Pits surf

GloP MatriX:

(1749) Defect

(1750)

(1751)

(1748) Cut

(1747) = Stake hole deposit.

Digi photo 64/PR0608/9.

Interpretation/Discussion

Cremation Cut and deposits - not a classic primary cremation in an urn but simply a stratigraphic accumulation of cremation material - on the cut sheet it was mentioned that this may simply be a secondary dump of cremation material - however, the clear stratigraphy visible in section may suggest that this is not so simple - an explanation - Simple numbers 1385 1386 1387

SEE OVER FOR Gene MATRIX

WOODEN STAIN MATERIAL (1985) THIN LAYER HERE AND ON OPPOSITE STEP.

COFFIN.

WOODEN STAIN MATERIAL ON BOTH VERTICAL EDGES, WITH OCCASIONAL SMALL IRON NAILS.

POSS. STAKE HOLE
Large stopped grave containing a single interment within a coffin.
A large amount of charred was retrieved from the grave backfill - possibly this material derives from an earlier grave which was within the footprint of grave 15601. It completely removed upon construction of 1560. The areas of charred were planned separately (rectified) in case they came to represent structured deposition and therefore directly related to grave 15601.

CONTEXTS: 1368, 1559, 1561, 1578, 1579, 1581, 1586

Find ref# for charred in case of structured deposition.

1583 = 1584 = 1585 Wood stain on step

1593 coffin 1687 skull

### STRATIGRAPHIC MATRIX
- 1909
- 1908
- 401
- This context is
- 1908

### Description (See check lists):
- Rectangular
- Heavily truncated - surviving edges
- Vertical, base irregular
- **Length:** 1.07 m
- **Width:** 0.45 m
- **Depth:** 0.10 m max
- **Filled by:** Skeletal 1909; backfill 1911

### Interpretation/Discussion
- W-E grave of infant inhumation - pretty much just the base surviving - S edge heavily truncated so shape of grave cut existing.

Hemnmalled footwear worn at time of interment, still in situ (ca 4-5 rows) - bones of feet not surviving or in poor condition, possibly a result of leather decomposition augmenting the deterioration of the bone?!

As with many other graves on site (ref. SE corner) - the bone preservation is good with the exception of the torso - is this a result of the body liquor having nowhere to run off within a discreet feature and aiding decomposing bone deterioration during decomposition of the major organs?? (NB - little or no backfill or "slump" between skeleton and base of grave for liquor to "soak" into)
**SITE** A421

**STRATIGRAPHIC MATRIX**

- 400
- 1921
- 401

**Description (See check lists):**

This Gr is for Grave Group:

- 1922: Sub-rectangular (E-W).
- 1923: adult, poorly preserved.
- 1924: Fill with increased organics due to overlying drain's seepage.

**Samples:**

- 1535 - 1537
- Dig images: 775 - P2180016 to 781 - P2180022

**Interpretation/Discussion**

This Group was located under a modern drain which was laid in a concrete raft. Upon removal of raft, revealed underlying grave.

Although upper fill truncated, basal 19cm & Soles survived.

**DESCRIPTION (See check lists):**

- 1931 - GROANE Cut
- 1932 - GROANE Blau
- 1933 - Coffin
- 1934 - SKELETON
- 1935 - VESSEL

**Digital Photos:** - GEN: 784/P2180003 - 787/P2180006  
RECT: 788/P2180007

**INTERPRETATION/DISCUSSION**

W-E aligned inhumation of adult male (subject to osteological analysis) of indeterminate age.

Heavily truncated by modern service set in concrete. Everything west of lower legs is truncated with the exception of the upper torso and left hand which have presumably escaped truncation as they were lower down? Fortunately a vessel and spindle whorl...

**RECORDE**

**INITIALS**
which probably accounts for the staining on the skull and "discolouration" of the backfill at the western end of the grave.

Hobnailed footwear was worn on the feet at the time of interment (4387 + 8) but no other grave goods accompanied the burial.

NB: A 'nail-like' object or pin (Fe) was recovered from within the hobnails on the right foot. This may be a nail which fixed the lid and has fallen into the coffin as it deteriorated. However, it is considerably thinner with a flattened end and may be a personal object placed within the coffin? (ref. SF 4404)
Grave Group for a S-N oriented grave.
Consists of cut 727, burial 729 and backfill 728.
The presence of a coffin was indicated by 14 fixing nails, and two discrete areas of hobnails were also recorded.

### Description (See check lists):

Coffin represented by Fe nails

SFs 1009, 1036-8, 1075, 1079, 1144, 1127-9 (all on p 201)

Nails 1009, 1127-9, 1036 and 1144 seem to be in situ, forming the northern side of the coffin, but the rest of the coffin has been disturbed by the insertion of later burial 530, which cuts through this grave.

**Description (See check lists):**

Number allocated in px to a pit shown in plan but not otherwise recorded during the excavation. This is one of the large pits in the complex of inter-cutting features in the central part of the site. It seems to have been treated as part of pit 1628 during the excavation, but on plan is clearly shown as a separate feature cut by 1623.

- Samples

**Soil description (see Context …………………..)**
Skeleton discovered in post-ex mixed in with SK5 1+38+1+34. Originally given number 2062, but changed to 2064.

**Additional description**
Possibly orientated N-S, but truncated by later graves.

**Interpretation**
Early Iron Age and more recovered. Mandible has cut marks, possible evidence of decapitation? (2064)
No group number assigned.

**Stratigraphic Relationships**

| this context is | 2064 |

**Excavation methods, lighting, conditions**
Pieced together in post ex from apparently disarticulated bones.

Matrix for part of Group 2

*Relationship between 1442 and 1558 destroyed by pipe trench
but 1515 graves are usually later than E-W ones
NB. 1449 and 1326 intersect on plan, but no relationship has been recorded.
Graves recorded as cutting group 450 but not related to a specific fill or intervention, and those shown on plan as cutting it, but with no relationship on the Obverse.

Matrix for part of Group 5

Graves cutting gully 470. These are all recorded as cutting the Group number rather than a fill number.

NB Graves which cut both 470 and the, later ditch 450 are on sheets related to 450.

NB 1221 is a mandible (in back-fill?)

**PROGRESSION OF SURVEY WORK** - including areas worked, type of work, tasks undertaken, general problems etc.

Surveying began Tuesday morning (4/11/3) with the establishment of two permanent survey stations (OA1000 and OA100). The station was established by geodetic station from the corners of the structure but resulted in large residuals so further work will be necessary to ensure accuracy. Surveying of the soil marks also took place on Tuesday, Thursday and Friday.

It became clear on Friday that the original data provided for the site by the county council is suspect, entirely incorrect and because of this the base stations will need to be re-surveyed.

**PROGRESSION OF CAD WORK** - including areas worked, tasks undertaken state of plans etc.

None to date

**TRAINING Undertaken** - Detail name of those trained, on what and to what proficiency

[Blank]

**Date of last backup**

Survey Staff: R. Cole  
Completed by: R. C  
Date: 10/11/3 - 14/11/3

**PROGRESSION OF SURVEY WORK - including areas worked, type of work, tasks undertaken, general problems etc.**

Site Surveying of DP's, CRs, SFs and IrVs continue

**PROGRESSION OF CAD WORK - including areas worked, tasks undertaken state of plans etc.**

Initial site survey data combined to produce one all site plan (pre-ex). Working shots from digital camera downloaded

Friday - 2000 excavation - pre-ex plans re-digitised and combined with 2003 pre-ex plans

**TRAINING UNDERTAKEN - Detail name of those trained, on what and to what proficiency**

Jim Collins and Lucy Norman familiarised with Leica TPS703 to the point where either can stand in as Site Surveyor. LN, Anirie Bingam and Diane Mahoney familiarised with digital camera DC7 and download procedure

Date of last backup: 14/11/3

**Date:** 9/12/3 - 12/12/3

**PROGRESSION OF SURVEY WORK** - including areas worked, type of work, tasks undertaken, general problems etc.

On site survey of DPs, GRs, LVLS, SFs, etc. on going. SC off site Monday to Thursday, RC off site Thursday.

It has become clear during the course of this week that the necessity of digging under plastitunnels will require the establishment of numerous temporary stations. This has obvious implications regarding the accuracy of all surveying.

**PROGRESSION OF CAD WORK** - including areas worked, tasks undertaken state of plans etc.

Post ex plans digitized by RC Monday to Friday. For details see Larkhills phase 2\Geomastics\Drawings\Current\Post-ex Plans\plan record.

N.B No metadata created for drawing. This will be done in built at an appropriate time.

**TRAINING UNDERTAKEN** - Detail name of those trained, on what and to what proficiency

**PROGRESSION OF SURVEY WORK** - including areas worked, type of work, tasks undertaken, general problems etc.

On site surveying of DP's, GRs, SFs and WLS on going.

Presence of polytunnels on site has required the total station to be moved during the day which is creating more work than should really be necessary although this has the accuracy of surveying has been maintained. It has been noted that the accuracy of the station is around 0.01m. However, when set up later in the day this discrepancy seems to be reduced. Could this be caused by changing air temp?

**PROGRESSION OF CAD WORK** - including areas worked, tasks undertaken, state of plans etc.

Post ex plans digitised by RC Monday, Tuesday and Friday (see plan record (digital)).

No metadata produced thus far.

**SITE CODE:** AY21

**PROGRESSION OF SURVEY WORK** - including areas worked, type of work, tasks undertaken, general problems etc.

- On site survey of DPs, GRs, SFs, LUs, etc. ongoing.
- Training of site staffs to basic proficiency on the total station began with BP. By the end of next week I hope to have also trained RW and DM with the aim of familiarising all of the site staff with its basic sanctions by the end of the excavation. The only difficult part of this will be making sure each gets enough practice.

**PROGRESSION OF CAD WORK** - including areas worked, tasks undertaken state of plans etc.

- Digitising of post-ex plans ongoing. The decision was made this week that at least one skeleton should be digitised every week "to make sure that there are no problems with the process". The first skeleton thus digitised was SK(967).

**TRAINING UNDERTAKEN** - Detail name of those trained, on what and to what proficiency

Training of site staffs to a basic level of competence on the Leica TCR705 began this week with Becky Peacock (BP). As of 23/1/14 she can set up and locate the total station (supervised) and survey features, etc. (unsupervised).

**NOTES:**
- **PT. NO.** = Reference number for each point.
- **EASTINGS** = Eastings coordinate.
- **NORTINGS** = Northings coordinate.
- **HEIGHT** = Height coordinate.
- **DESCRIPTION/ERRORS/NOTES** = Description or notes for the point.
- **CODE** = Code indicating the type of point:
  - **DP** = Drawing Point
  - **GR** = Geometry Point
  - **LR** = Lineal Reference
  - **IR** = Internal Reference
- **STRING** = String indicating the type of point:
  - **STRING** = String type

**PREFIXES**:

Plan of grave group 423 showing location of coffin fittings/nails and conjectured extent of coffin

Conjectured extent of coffin (420) based on variation in backfill (422) and location of nails (ref. 420/422)
AY21
PLAN 208
1:10 RB

Post-ex plan of grave cut 149; Group 423
Showing location of section 100

Levels:
1 - 57.53
2 - 56.73

157043.061
517456.073

157077.836
517382.928
Projected alignment of casket

Nail bent into ground at north end

Hobnail found in left hand

Hobnail found resting on sternum

14/11/03
NOTE: The S. edge of [141] was over-cut during Exc. Some of Grave Fill (410) was removed while extracting [412]... This was recognised as we encountered six 483s of [141]. The hatched line indicates edge of real cut and dot dash what I Exc.

α - This edge does Exist on Surface then slopes quickly to form the two cuts [169] + [114]
Plan of grave group 490 showing location of coffin nails and possible coffin stain (487)

Concentration of chalk within

Coffin nails likely not securely located within grave but certainly from NE corner

Surviving wood fragments
1) Wood fragment, above view, smooth side pointing out, IE away from the skeleton. FE/wood straining on end touching preserved wood and nail.
2) Piece of preserved wood attached to nail.

Drawn by J S
10/12/03

Key:
- Upright Hobnail
- Down facing Hobnail
- Orientation
- Unknown

Clusters impossible to plan individually

Many more Hobnails found; however, impossible to plan due to corroded condition and positions within bones of feet.

The evidence suggests that the right foot has collapsed onto the left ⇒ no clear structure.
PLEASE NOTE:
THERE ARE NO SECTIONS FOR THIS EMPTY GRAVE DUE TO SEVERE TRUNCATION.

Organic Staining, from Coffin or Boat Decomposing
NOTES: This SK (479) is PROXAL with feet at West End. So the view of lower legs is from posterior.

Since there are so many hobnailed feet, they appear to be from boots that were worn at the time of inhumation. They have broken up all around the feet. There is no structure evident. So, I have divided them as illustrated above for the purposes of collection.

**NOTES:**
The 1600 nails were collected as distinguished above,
- the position indicates the feet were worn at the time of interment, and the soles decomposed while on their sides.

**GROUP 1010**
[837] (838)
SK. 956
Notes: a. Unit 16, Ex. [1037] the top of the fill was heat altered from events in [401]. So too was the fill (417) it is impossible to see which cut which. The Pit [404] has stratigraphic deposition of sediments.

It would be interesting if [403] produced Pit and all other graves are cut into Pit after its final phase of use. Style of grave goods could indicate the hiatus that the above suggests.

[Diagram of geologic section]

Notes:
- This section was revealed upon exc. of [884] and [751], both cuts longitudinally align E-W and offer this section along their northern edge.
- The cut [744] was recorded previously on S. 226, however these fills were isolated and can not be physically linked to the fills recorded above.
- Except [997] from 744 starts the east side of [227], [551] and looks to be the same fill as [997].
- [996] is very similar to [997] that there is no physical contact.

Coordinates:
462/1 - 157°06'7.570 E
- 51°39'5.075 N
462/2 - 157°07'1.933 E
- 51°39'4.008 N
